

4.13.5 (05.24.2007)

- Added ability to change the font sizes (from the View menu).
- Fixed broken BinaryHeap data structure.
- Fixed various DHT-related deadlocks.
- Made the DHT more resilient to attacks.
- Fixed occasional problems with pausing and/or resuming torrents.
- Made OOB results a little harder to spoof.
- Fixes that should decrease traffic to ultrapeers.
- Added a network-level filter for hostile hosts.
- Improved reliability for F2F transfers.
- Workaround some more errors with filechoosing.
- Fixed search result selection problems on OS X.

LimeWire LLC has been monitoring and controlling content that appears on the LimeWire software and the Gnutella network, which is the network the LimeWire software connects to, since May 24, 2007. LimeWire LLC has in fact been monitoring the Gnutella network for a much greater period of time. In fact, due to the fact that LimeWire was displeased with efforts of companies engaging in advertising and anti-piracy efforts on the Gnutella network, LimeWire LLC started to implement code for the "Hostile Host Filter" in January, 2007. Since November, 2008 LimeWire LLC also added a "URN Filter", providing LimeWire the ability to block any file from the network that they see fit. This feature works in a similar fashion to the Copyright Content Filter, however again, LimeWire LLC has chosen to use this additional filter to block advertising and anti-piracy efforts. The Hostile Host Filter, URN Filter, and Copyright Content Filter could have been used to block copyrighted materials from being distributed, child pornography, assist with stopping issues such as identity theft, and so forth.

4.11.0 (03.10.2006)

- Improved connection management. LimeWire will use much less resources and memory when making outgoing connections or starting a download.
- Support for 'Secure Results'. These are messages that LimeWire can verify are secure and not tampered with in any way. Some messages that contain risky data (such as a URL to go to) are discarded if they are not secure. Secure Results will appear in your search results quality column with a 'lock' icon instead of the stars.
- Support for 'Content Filtering'. This allows users to optionally have LimeWire check all files they upload and/or download against a list of content that copyright owners have requested be removed from the network. This feature is in active development. To learn more about it, visit the content filtering 'about' page.
- Improved temporary task handling. LimeWire will use a pool of cached threads to handle long-lived tasks instead of constructing a new one for each. This should significantly improve performance on some machines.
- Improved checking for a live internet connection. LimeWire should do a better job of knowing when the internet is alive or not.
- Fixed the sizing of the LimeWire GUI. It will now take into account all sorts of intrusions on the desktop space, such as the dock on OS X or taskbar on Windows (be it on the top, left, bottom, or right). Folks who liked to keep LimeWire maximized may have noticed that it shrank slightly every time LimeWire was restarted. This is now fixed.

Since March 10, 2006 LimeWire LLC added a "Copyright Content Filter" into the LimeWire software, which filters out files that copyright holders have requested be removed from the LimeWire software. The onus however is on the LimeWire user to go through several menus in order to even find the option to turn this filter on, and then turn the filter on. This filter could have been mandatory and turned on by default without the option to turn the filter off, which would insure that copyrighted content was not illegally exchanged.

The simpp.xml file is a hidden file that is created and distributed by LimeWire LLC to all LimeWire clients on the Gnutella network. The file is usually updated on a daily basis and contains the IP addresses that LimeWire LLC has chosen to block, which are located in the "FilterSettings.hostileIps" section of the simpp.xml file, and the specific files that LimeWire LLC has chosen to block, which are listed in the "FilterSettings.filteredUrnsRemote" section.

LimeWire Forums > Programming LimeWire > Programming LimeWire

This is a LimeWire software Internet discussion forum hosted on the LimeWire LLC website. In this forum, a user poses the question as to what the simpp.xml file does, and more specifically, what the function of the "Hostile Host Filter" is. In this discussion, Mr. Sam Berlin, who is a senior developer at LimeWire LLC and Mr. Aaron Walkhouse, who is a LimeWire discussion forum moderator, discuss in great detail how LimeWire LLC has been actively monitoring and controlling content that passes through the LimeWire software and the Gnutella network. This monitoring has been taking place since at least January 2007, which is when LimeWire LLC started working on integrating the "Hostile Host Filter". The final working version of the "Hostile Host Filter" was incorporated into V4.13.5 of the LimeWire software, which was released on May 24, 2007.

What is Simpp.xml?

I see this file is being updated everytime I load limewire and there's a huge list of hostile IP's. Where is this data coming from? I thought the hostile list was created by each individual client when they click on "junk" icon next to search results. Is this coming from my ultrapeers, limewire, somewhere else?

I'm concerned by the fact it seems settings can be changed by a file I didn't create and seems to autoload on each execution.

Thanks

It's a network-level set of properties.

So this is something controlled by the Limewire network, not something that can be modified by just anyone? I just want to be sure this isn't something that can compromise our server since settings can be modified by an outside source and my network admin wants clarification on it.

Is the list of ip's found in this file considered hostile ip's or are these spammers that are polluting the gnutella network?

Thanks Sam.

It's not something that can be modified by anyone. (Though users can have their own separate filter list.) You can turn off loading of it on your servers by changing Lime Core Glue to not link up the remote-settings-manager, and delete the existing **simpp.xml** file.

I would like to use it, since there must be a reason those hosts are considered hostiles in there. I will shut it off from autodownloading but will keep it as is, thanks. Are those hostile ip's based on spammers or on people who abuse gnutella by the way?

Thanks

Yes, that's a short list of the biggest bandwidth wasters among them, distributed to all LimeWire nodes to help reduce the damage they cause to the entire network.

You can also add a more comprehensive list to protect yourself from a wider array of problems like the widespread worm infestations and the rest of the spammers who didn't get into the short list.

Thank you Aaron, I had no idea that list was so massive, wow.

Last issue on this post, I worked with Sam in another thread on this board to setting up a patch to direct alternate sources to other servers I control (5 servers in total where if the first connection fails, I direct the altsources to the other 4 servers to continue uploading on our media files).

Each server has 1 client running with 5 ultrapeer connections. I wanted to be sure this setup wouldn't get our ip's blacklisted or banned in any way before going live as all 5 servers are mapped to the same IP block (unique IP's for each server).

Thanks Guys.

We're only really interested in excessive behavior. If you find yourself blacklisted and want to work it out, send an email to me at sam at limewire dot com and we'll see what we can do.

Since May 24, 2007 LimeWire LLC has been
monitoring and controlling content that passes through
LimeWire and the Gnutella network. As you can see,
LimeWire LLC has even been taunting companies that
attempt to advertise on the Gnutella network, or
companies that conduct P2P anti-piracy efforts.

List List of IP addresses that LimeWire LLC has
chosen to block after monitoring the Gnutella
activity of the people at those IP addresses.

SIMPP.XML file is updated on a daily basis by LimeWire LLC. LimeWire LLC keeps a constant watch on the Gnutella network and adds IP addresses or URN's of files to the simpp.xml file on a daily basis which they consider to be hostile, which again, in nearly all cases means strictly filtering out the efforts of companies that engage in advertising or anti-piracy efforts on the Gnutella network.

In November 2008 LimeWire LLC added the ability to block specific URN's, which essentially means that LimeWire has the ability to block any specific file from the LimeWire software and the Gnutella network. For example, the URN of copyrighted materials could be used to automatically block copyrighted materials from being distributed.

Subject: Conversation with Christine Cioffari, RE: PeerMatrix

Dear Mr. Lovejoy,

I am sending you this e-mail as a follow-up to a conversation I had with Christine Cioffari.

Recently, we have become aware that LimeWire has implemented a network-level filter that blocks the IPs that Limewire considers to be "hostile", which includes the IPs of our servers.

From: Bernard Trest [btrest@peermatrix.com]

To: 'george@limewire.com'
Cc: 'nathan@limewire.com'
Subject: phone call

George,

Thank you for your phone call. I apologize that I missed your call however I was in a meeting.

I would like to open up a dialogue between our companies to see how we can work together regarding the IP filter issue

Subject: Follow-up to our phone conversation

Attachments:

George,

I'm sending you this e-mail as a follow-up to our phone conversation we had last month. At the time, you requested

suggested I fly down to meet you in Manhattan to discuss a possible partnership between my company and LimeWire. However, the holiday season has been busy for my company as we're currently in the midst of preparing for the launch of PeerMatrix (I hope your holidays were happy and a little less busy and hectic than mine!) So instead of flying down I'm sending you this e-mail, which contains more detailed information about PeerMatrix

As you mentioned during our phone conversation, P2P advertising is a potential gold mine, an untapped source of revenue waiting to be exploited by a visionary company.

As we discussed during our phone conversation, P2P is the next big thing in Internet advertising, a market that has the potential to be worth billions of dollars in the next few years.

Unfortunately, at this time we have no interest in any sort of partnership with LimeWire as you suggested during our phone conversation.

From: Bernard Trest [btrest@peersentry.com]

Subject: Update

George,

I just wanted to touch base with you regarding our previous communications, and also regarding a situation that has been occurring with the Gnutella network and in turn Limewire over the past few months.

As you also monitor the Gnutella network we are sure you are aware of the situation in regards to what appears to be hacking groups that have infiltrated the Gnutella network. The hackers are trolling the Gnutella network searching for financial and personal information. In fact, based on our tests up to 90% of Limewire searches now appear to be searches that are conducted by the hacking groups in search of personal data. We have noticed hundreds of search terms used by the hacking groups such as "credit card", "password", and so forth. We have modified our software to buffer these incoming searches and have noted hundreds of financial and personal data related search terms that now encompass 90% of searches on Limewire. We assume that a hacking group has written customized software to troll the Gnutella network for information that can be used for purposes such as identity theft, fraud, and so forth.

We are very concerned regarding the situation with the hackers, as Limewire has tens of millions of users so there is great potential for widespread identity theft and fraud that may be occurring. We in fact assume that most likely hundreds, if not thousands, of Limewire users may have already been affected and could have already had their personal information, including credit card numbers, credit reports, and so forth already compromised.

We do realize that there have been previous media reports focused on Limewire users that in error share personal data, however now there appears to be hacking groups that are taking advantage of the security threats posed by Limewire and are using automated software to troll for personal information. We are sure that you are aware of the situation and thus far you seem to have ignored the situation for a period of several months. We plan on contacting media outlets such as CNN to make them aware of the situation. We also plan on contacting the RIAA, MPAA, Symantec, and many other companies and organizations to enlighten them on the situation that is occurring with Limewire. Again, this situation is very alarming to us as the potential for identity theft has now greatly increased from previous media reports, as again, now there appears to be very efficient automated trolling software used by hacking groups.

We are aware that you have been testing an advertising solution and we would like to inform you that your advertising solution does in fact violate our patent.

The Team

Lime Wire is dedicated to building high performance software tools for peer-based networking. We help to construct a robust, distributed infrastructure that has greatly enhanced current knowledge of peer-to-peer algorithms and behavior of peer-to-peer networks.

Our dedicated team hails from some of the world's most prestigious academic and professional institutions.

Mark Gorton

Chairman

Mark holds a Bachelor's in Electrical Engineering from Yale University, a Master's in Electrical Engineering from Stanford University, and an MBA from Harvard University. Mark has worked as an electrical engineer for Martin Marietta (now part of Lockheed Martin) where he specialized in digital signal processing and speech recognition. He created modems for the Air Force that were designed to perform in the presence of enemy jamming signals on the electronic battlefield. Mark then joined Credit Suisse First Boston where he worked as a fixed-income proprietary trader before launching Lime Wire.

George Searle**Chief Executive Officer**

Prior to joining Lime Wire, George started, acquired, led, built and/or sold a number of new media ventures. He formed Mediaguide as a joint venture with ASCAP, where he developed and implemented an automated tracking system to help ASCAP better monitor, collect, and disburse payments to rightsholders while simultaneously expanding the royalty base. George co-founded ConneXus, where he created a revolutionary service that let consumers identify and purchase music they hear on ordinary radio using only their mobile phone. The service received critical acclaim as an important new e-commerce model for traditional media, entertainment and wireless companies. George orchestrated the acquisition of Swiss-based YES International, which he combined with ConneXus to form YES Networks, whose services make radio and TV interactive and social. As a consultant, George has helped other businesses conceptualize, develop and launch breakthrough technologies, products and business plans for online dating, social media and on-demand software. Prior to his foray into new media, George worked at two DoD think tanks, where he advised the Offices of the Secretary of Defense, U.S. Air Force and other agencies in the development, acquisition, test and evaluation, launch and operation of various national security satellites. George earned his BS in Mechanical Engineering from Purdue University, an MS in Applied Mechanics from Cal Tech, and an MBA from the Harvard Business School.

**Jesse Rubinfeld****Chief Financial Officer**

A native Texan, Jesse holds a B.S. in Economics from the Wharton School and a B.A. in Music and Jewish Studies from the University of Pennsylvania. Prior to joining Lime Wire, he worked as a business analyst for Lime Group and an equity trader at First New York Securities. A piano-playing singer-songwriter, he writes and records original music and performs regularly on NYC stages. He also enjoys running, swimming, biking, and coding.

Ari Amanatidis

Web Designer

Ari joined Lime Wire in May of 2008. Ari's first experience in everything web was designing the Northeastern University music department's web site while earning his Music Industry degree there. Prior to finishing up that degree, Ari spent four years in Greece sipping frappes, going to the beach, spending summers on the islands, and earning an associate degree in business in his spare time. Ari's hobbies include reading, watching, smelling, hearing, moving, learning, sleeping, socializing, and basketball. Ari's hobbies do not include writing about himself in the third person.

Felix Berger

Senior Open Source Developer

Felix graduated with a degree in Computer Science from the University of Stuttgart, Germany in 2006. Passionate about Open Source, he has contributed to KDE and a number of other projects. Felix also likes to spend time reading books in their original language, meet interesting people, and studying the inner workings of the world and the human condition.

Sam Berlin

Development Director / Client Team Lead

Sam began his trip with LimeWire early in 2002, submitting open-source patches. He interned from January to May 2003, and started fulltime in May, after graduating from New York University's Gallatin School with a concentration in Computer Science and Philosophy. Before starting at LimeWire, Sam worked at Sovereign Bank's Foreign Exchange & Derivative's area as the DBA / website developer / internal software developer / general techie. Outside of LimeWire, Sam enjoys cross country roadtrips, water skiing, playing the piano, sleeping, the Dune series, and Burning Man. His favorite Soul Calibur 2 character is Sophitia, and his favorite Super Smash Brother's Melee character is Roy.

David Chen

Software Developer

David graduated from Cooper Union with a degree in Electrical Engineering. He worked at Register.com and NYSE Euronext before joining Lime Wire. In his free time, he likes to run, hike, and go to the beach. He is also passionate about studying history, politics, and economics.

Christine Cioffari

Accounting Associate

Christine joined LimeWire in January 2006. She graduated from Bard College with a concentration in Psychology, and misses upstate New York more than she expected to. In her free time, Christine enjoys sewing, reading, and bars with backyards. She appreciates book suggestions and people who don't litter, and feels lucky that most of her best friends currently live in the same neighborhood that she does.

Lesly Dorval

Systems Administrator

Lesly graduated from the City University of New York with a Bachelors of Engineering in Electrical Engineering. He joined Lime Wire in the summer of 2007. His background spans market datafeeds, Unix and hybrid fiber-coax networks.

-

Michael Everett

Software Developer

Michael Everett joined LimeWire in the Spring of 2007. He graduated from Northeastern University with his Masters in Computer and Information Sciences in 2006. Prior to starting at LimeWire he worked in a research lab focusing on improving Text-to-Speech Synthesis in noise and personalizing Text-to-Speech Synthesis using Voice Morphing. Outside of LimeWire, he spends his time playing blues guitar, DJing, programming a digital mixer, and scouring the world in search of new music.

-

Jessica Frank

Software Developer

Jessica graduated from Cornell University's College of Engineering in 2006 with a B.S. in Computer Science. She joined Lime Wire in July 2007 and had previously worked at a company that developed Interactive Voice Response (IVR) applications. Outside of work, Jessica loves cooking, playing golf, and traveling.

-

Emily Getman

Web Designer

Emily graduated from Rochester Institute of Technology in 2005 with a BS in New Media Publishing. Before joining Lime Wire, Emily managed a computer lab at RIT, designed CDs and websites for a musician self-management agency in Boston, and worked for a small e-commerce company in Upstate New York. In her spare time, Emily enjoys visiting Toronto,

DJing in clubs, playing guitar, snowboarding, not eating seafood, collecting stickers, and using Macs.

Shannon Gillen

Project Manager

Shannon joined Lime in 2005 and is currently the Project Manager in charge of gut renovating Lime Wire's new building: so if you need any tips on how to stack plumbing, submit landmark applications, or design interior space she's your gal. She also looks forward to planning the fabulous parties and weekly events in Lime Wire's new home - where she may or may not drink too much and pick up cake with her hands. Shannon received her BFA from Juilliard for dance and founded DOORKNOB COMPANY. Her work has been presented at Dance New Amsterdam, HERE Arts Center, Ontological-Hysteric Theater, Festival Oltre Passo in Italy, LMCC's Sitelines as part of NYC's River to River Festival, and Fresh Tracks at Dance Theater Workshop. She is a 2009 artist in residence at DNA.

Derek Haas

Web Developer

Derek joined the LimeSpot team in April 2008, leaving behind the high stress world of international vagabondery for a more laid-back tenure in the backwaters of Manhattan as a software developer. He enjoys writing autobiographettes, fresh squeezed lemonade, and abandoning his hobbies before he begins them.

Charlie Hellman

Product Manager

Charlie received a B.A. in Communication at the University of Pennsylvania, writing his thesis on digital music market structures and cultural theory. Before joining Lime Wire, he served as a studio hand at a scoring stage in Sydney, Australia, and worked in Digital Business Development at EMI Music. A political junkie, Red Sox fanatic, and Greenwich Villager, Charlie likes hearing what's new, making playlists, skiing, planning trips, philosophical discussions, and playing his Taylor.

Tim Julien

Senior Software Developer

After completing his B.S. in Physics and Philosophy at Carnegie Mellon University, Tim spent a lot of time building J2EE application servers at Bluestone Software, Hewlett-Packard, and Oracle. After dabbling in financial web services at Bloomberg, he landed at Lime Wire in December of 2007. Outside of Lime Wire, Tim spends his time reading, watching Discovery HD, snowboarding, and playing his Wii.

Andrew Katsikas

Technical Writing Intern

In 2009, Andrew graduated from the University of Massachusetts Amherst with a degree in English. Besides pursuing his degree, he spent a lot of time working at a cooperative food store and playing in a few different bands. He just took up the bongos and is well on his way to having seen every bad movie produced in the 90s.

- **Leo Kim**

Senior Software Developer

Before Lime Wire, Leo's path on this planet included stints in Indiana (born and raised), a college preparatory school (Phillips Exeter Academy), liberal arts education (Wesleyan University), dot-com avarice ([CNET](#)), graduate school thumb-twiddling (Columbia University), and blog data mining ([Nielsen BuzzMetrics](#)). Other distractions include jazz + funk drumming, bicycling, jogging, [scotch](#), and reading the occasional [spam](#). Above all, Leo enjoys speaking of himself in the third person.

- **Cara Lemon**

Quality Assurance Tester

Cara, a native Texan, graduated with a BA in Anthropology from Brandeis University. An interest in linguistics led her to a natural language search company, and she has been working for startups ever since. She loves old blues, country, and jazz. Most of her favorite musicians are dead. When not at work, Cara is trying to find her way around a 1964 Gibson tenor guitar.

- **Tom Lipinski**

Office Manager

Tom joined LimeWire in September of 2007. Although he sits about as far from everyone else in the company (and under a gigantic fluorescent pig no less) he feels very much at home. He's

trying his best to make this place a home away from home for everyone. Maybe he'll get one of those \$3,000 hypo-allergenic cats he keeps hearing about for the office?

Nathan Lovejoy

Product Manager for LimeWire

Nathan began at Lime Wire in 2006 after which he held a number of positions, but is currently the Product Manager for LimeWire. Nathan has a BA in Semiotics from Brown University and his hobbies include collecting American whiskeys and reading up on media theory.

Sriram Malladi

Software Developer

Sriram has been with Lime Wire since graduating with a B.Tech from the Indian Institute of Technology, Madras in 2006. He initially worked on Limeberry, a WebDAV server written in Rails and then moved to the LimeWire Store. He worked in the India office until October 2007 when he moved to NYC. Sriram loves video games, football (soccer, to you Americans), insanely spicy food, reading Sci-Fi, dancing, Mentos and lolcats.

Jorge Mancheno

Web Designer

A New Yorker for most of his life, Jorge joined the team in August of 2006, making him one of the oldest among the current staff. Aside from his love for all things Apple, he also loves writing mean HTML, CSS and Javascript for LimeSpot. Early on in his time with Lime, he somehow managed to rack up the largest number of losses in a single Super Smash Brothers Melee match, despite being an avid all around gamer. These days, he regularly thrashes the competition.

Tom Monday

Director of Partner Relations and Marketing, Music

Tom joined Lime Wire in Winter 2007. Living proof that you can take the boy out of the country, but you can't take the country out of the boy- Tom's a little bit rock and roll and a whole lot country. He'd rather eat a bologna sandwich with Loretta Lynn than haute cuisine with Lily Allen . Would rather sit at the bar with Johnny Paycheck than go clubbing with Justin Timberlake. His art education has had absolutely no relevance to his work for entities such as No Depression, The Stranger, Barsuk Records, and CMJ. He's thrilled to be here.

Michael Nutt

Senior Developer / Spot Team Lead

Michael joined Lime Spot in 2006 after receiving an undergraduate degree in computer science from Vanderbilt University. In his spare time he enjoys riding his bicycle around New York and collecting (and using) old medium format and Polaroid cameras. He can hold his breath underwater for five minutes.

Jason Pelzer

Technical Director / Store Team Lead

Prior to joining the Lime Wire Store in 2007, Jason learned the music industry ropes at Sony BMG Music, overseeing the company's transition to the digital age. One important project he headed lead to Sony's appearance on the iTunes Music Store. Other projects included building a distributed system that allowed Sony BMG to service media distribution deals for third party companies, leveraging Sony's large media conversion cluster and electronic delivery capabilities to their fullest. Before his tenure at Sony, Jason did his time in the trenches, building interactive sites such as Qwest.com, Ice.com, AudiUSA.com, MistubishiCars.com, LensCrafters.com, PCH.com (Publishers Clearing House), and others. Jason was also active in the development of artificially intelligent players for the id Software games 'Quake' and 'Quake II', as well as being a sponsored death-match gamer back in the day when it didn't pay to play.

Anthony Roscoe

Web / User Interface Designer

Anthony joined Lime Wire in the Summer of 2007 after graduating from Kent State University with a BS in Computer Technology. Before working at Lime Wire, he was the driving force behind bringing two well-known companies up to Web 2.0 standards and recreating their look and feel from the ground up. Anthony spent his college years running a freelance business where he built and ran several national band web sites while also creating the artwork for CDs, press kits, posters, and t-shirts.

Kelly Smith**Music Manager**

Hailing from Orange County, CA, Kelly left all that was familiar and set off for college in New York City. Throughout her college years she interned for MTV and Virgin Records, her introduction to the music industry. Upon graduating, she worked for many labels in many departments (publicity, marketing and radio promotion). Finally enough was enough, and after escaping the doldrums of the major label world, Kelly became a lady of leisure and took a glorious 7 months off before joining Team Lime Wire on Halloween of 2007. During this hiatus she drank fine (ok, sometimes cheap) wine in Italy, got her passport stolen in Spain, swam with sharks in Belize, gawked at ships passing through the Panama Canal and played with a baby Sloth in Costa Rica. She also went to North Dakota.

**Mike Sorvillo****User Experience Designer**

Mike just wrapped up his Master's at Columbia University, graduating with a degree in Computer Science with a focus on User Interfaces. Prior to joining the Lime Wire team in January 2008, he helped to build a downloadable game for LEGO, and enjoys encouraging people to use it as a procrastination tool. Outside of work, Mike has an obsession with all things Italian and enjoys checking the Apple website to see new products, despite the fact that he's never been to Italy and has yet to buy a Mac. He has a penchant for creating awkward situations, laughing at really inappropriate moments, and considers himself to be the world's 6th best euphonium player.

**Johnn Tan****Senior Systems Administrator**

B.A. Applied Mathematics, Weber State University. Linux... bicycling... traveling... cooking... EATING!

Matt Turkel

Software Developer

Matt joined Lime Wire after 11 years in Japan working various tech jobs, playing guitar in a garage band and spending absurd amounts of time and money in dingy bars full of amazing people. He is slowly but steadily relearning English.

Jon Williams

Web Developer

Jon joined Lime Wire in Spring of 2008 after a stint at New York University. He graduated with a BS in computer science from the University of Rochester, with academic interests that include distributed computing and cryptography. While there, he developed a secure campus-wide web development environment. Originally hailing from Rhode Island, Jon enjoys bicycling, record collecting, speculative fiction, improvised music and creating video art. He resides in Brooklyn with a fog machine, very close to a taqueria.

E.J. Wolborsky

Programming & Marketing Coordinator

E.J. was born severely bowlegged in a small Arkansas farming town in the Mississippi Delta. After a few sets of leg braces and a family relocation to the bustling metropolis of Little Rock, he would grow to become a formidable intellectual man-machine. After finishing at his all-boys, tie-and-khakis Catholic high school, he would go on to graduate from Yale University

with a degree in History. Now, he lives in Brooklyn and does HR and Recruiting stuff for Lime Wire. His hobbies include obsessively following developments in international soccer (football, futbol, futebol, voetbal, fussball...) and, more importantly, never faking the funk.

Tieg Zaharia

Web Developer

Tieg joined Lime in Spring of '08 (ah, what a good year). He studied Film at the University of Utah, receiving his BA in 2002, and was sucked back into the world of programming shortly thereafter. Since then, he has been doing a lot of client-side and server-side web development. He is fond of malleable languages (Ruby), tea, Oulipo, forgetting all the Japanese he once learned, armored polar bears, and the movies of Alejandro Jodorowsky.

These are LimeWire software Internet discussion forum hosted on the LimeWire LLC website. In these forums, users express their dissatisfaction with LimeWire V5 and many users state that they have reverted to previous versions of the LimeWire software. In response to the concerns expressed by users, Mr. Nathan Lovejoy, a developer employed by LimeWire LLC, and Mr. Aaron Walkhouse, a LimeWire forum moderator, informs LimeWire users that previous versions of the LimeWire software are still available for download on the LimeWire LLC website and instruct LimeWire users how to download previous versions. In fact, during one discussion, Mr. Walkhouse states that the previous versions of LimeWire will still be not only available for a long period of time, but will also be supported by LimeWire LLC.

 **LimeWire 5 Is Live**

LimeWire 5 is live! You can download it at <http://www.limewire.com/>.

LimeWire 5 features a completely new interface, rewritten from the ground up. We've kept all the old features that you've come to know & love, and added some awesome new ones. The coolest new feature is sharing directly with friends. You can sign into any Jabber (XMPP) server such as GMail (Google Talk) or LiveJournal, and use your existing buddy lists. When you search, you'll see results from friends listed above other search results.

We know people are concerned about viruses, too. We took the problem to heart -- LimeWire 5 protects you from accidentally downloading a program or other file that could give you a virus.

LimeWire 5 also sports a completely redesigned library. You can easily tell what files are shared with who. LimeWire won't automatically share new things without your consent. If you add a new file or folder, you have to tell LimeWire to share it.

And, to top it all off, LimeWire still comes with absolutely no bundled software. We won't bug you about installing a toolbar for your browser, and we won't ask you to change your homepage. When you install LimeWire, what you get is LimeWire.

For those that use LimeWire's open source code... As part of writing LimeWire 5, we took the opportunity to make the code even easier for aspiring developers to use. There's now an easy-to-use "core-api" component. You can use the "core-glue" component as LimeWire's implementation of core-api, or you can write your own if you'd like to test things out yourself. The tutorials at http://wiki.limewire.org/index.php?title=Using_the_Core will be updated soon to make use of the new API.

Thanks!
The LimeWire Team

 **Don't Like IT At All**

I just downloaded the 5 version and find it very unfamiliar. Can I use it the way it used to look and feel in version 4.8.18 ? Help please.
Thanks, Steve

4.18 is still available in the old versions page. Version 5 is a fresh start, so adding an additional layer of code just to emulate the old look and feel would actually make it slower than v4 and introduce new bugs.

bayauto,

What exactly don't you like about LW 5? Our goal is to make 5 even better and easier to use than 4.18 so any feedback would be appreciated.

New v5 VS 4.8.18 not very frendly

The choice for Audio only, or all the other formats and the search fields shown in 3 drop-down menus or categories is gone. The new 5 shows files being downloaded in a string, not stacked. All of the earlier functions and options are either missing or hidden or buried somewhere not making it user friendly. The terms poor, good better great or whatever are useless as to what the actual speed of download is, we could tell when a porn or worthless file was hit on because they always use the same speed and file length. I'm not being unusually crabby, I simply have no way to relate to the new format, and I find it hard to believe that a graphics display would slow down the new format. For heaven's sake, we can use Windows Media Player 7, 8, or 9 and still down-load and play mp3 files just as fast as 11. Your programmers and code writers are either feeding you a line, or they are very short on talent, not meant to be a slam but rather an observation, not consistant with just about any program you could think of. I sure hope you find a solution. I dumped v5 and reloaded 4.8 Steve

Not happy...

I'm not happy 5.0 either. I have LW Pro and wanted to switch back to the older version, but it won't let me...

Yes that is why I use pro on one laptop and free on the other. I will never update pro again for the reason that I don't know if or when I can go back to an earlier version. This could be the demise of LimeWire, while they thought they were making it better.

Going back to version 4.18.8 PRO should be easy enough:

1. Go to your PRO download page.
2. Look to the left where it says "Get LimeWire Classic"
3. Click that button
4. Choose your OS and download 4.18.8

Its getting better...

Actually, the more I keep playing around with 5, the less I dislike it. I'm going to give it a chance.... maybe I just don't like change.... 😊

Naturalorder,

Glad you're starting to like the new LW 😊. As you keep trying it, if there's features from 4.x that you miss or if you can think of

anything that would help other people transition from 4.x to LW 5 easier please let us know.

If you want to turn the connection to iTunes off, it's in Tools => Options => Advanced at the bottom of the Files tab.

why cant i preview and delete crap.

my problem with the new LW is that i can't seem to preview the movie as before. there are allot of crappy copies on here and i like to see if my download is decent before i bother to get the whole thing. then if i decide it's no good i can't seem to get rid of it and everytime i log on it starts downloading the same crap that i stopped last time.

if i knew it was going to be like this i would have stayed with 4.18....is it possible to go back ????

Older versions are always available on the download pages.

What you really need is to [get familiar with Bitzi](#) and start using it.

one quick question

What's the difference between a file with mp3 and snd? By the way LW 5 has shortcomings but everything dealing with the computer does. I appreciate your concern Sam and I am glad that you guys are continuously trying to make LW better.

Thank You

It's the "frustration factor" from the new layout that is the culprit here.

I'm not someone who posts "IT SUCKS!" and then runs, but you must understand that the typical user has gotten so comfortable with the traditional layout of Limewire that they get angry or frustrated when it is changed so drastically from the norm.

In another "LIMEWIRE SUCKS!" thread on these forums many people asked for a "classic view" to be returned to them. Perhaps they would be more welcoming to a new version if they understood how to use it. I tried for a few hours to understand version 5 and I have to admit that it defeated me. I'm no tech guy - I just like to share things easily. I don't chat or use any social capabilities and I couldn't figure out how to specify a folder for sharing for over an hour when I got started. I'm not an idiot - I know when something no longer appeals to me.

Don't get me wrong. I really enjoy Limewire and I will continue to use an older version until I can be convinced that a new one is the best choice for me. I applaud anyone's efforts to improve a popular program. However, the minute I can no longer use it, it ceases to be an improvement.

Not talking about anyone in particular, just some ppl in general. Like when I'm chatting with a girl I know on stickam and every second post in her chat room there's someone typing "show your tits". It's making stickam less and less fun everyday because the chat rooms are getting filled up with crap.

Limewire 4 is no longer supported, so that does not solve the problem for me.

The version 5 is more secure and will become indispensable in a few years.

Then you have to upgrade to Limewire 5 or (possibly) 6, whether you like it or not.

One solution of course would be to start using linux (though learning that would take at least a year.. but it will be rewarding).

Oh Limewire team said they did usability test on users. I can see how they like the clean interface But you guys probably should have added a thing under tools tab to unlock advanced features that just about restored it to everything we loved in version 4, Including the "player" that was always in view. Maybe in version 6 it will have player and also the advanced option?

Most, if not all, of the old features will be added eventually.
The new GUI will be easier to build on and more reliable.

Thanks Aaron. Because another thing I don't like is I can only search 2 items at once. Since i'm usin 800x600 resolution, if I search more then 2 then I can't see the other items I was searching for.

I hate it too

I'm not going to say it sucks, that is a conclusion that requires polling knowledge of the overall audience. Responders here who try and assert their opinion as the community will are just noise.

Specifics: I REALLY hate the fact I can't select all the files in the download list, most often to RESTART them after failures. I miss the far more detailed download list of the prior version (like transfer rate for each file so I can kill the ones that really suck).

Bugs: my drive letter went away and I had to change it. Turns out that if you start Limewire after that event, it locks into an error loop from which there is no exit. I had to kill the process. I was never able to recover from this; instead, I had to create a drive at that letter number before I could even START Limewire successfully.

I find the new interface generally awkward, but I'll give it some time, and I agree that it is "prettier" though I prefer "functional". And some features are undoubtedly nice (though not enough that I can remember any to note here).

An old bug: disk failure. Usually this bug is "unexplained". I do NOT have a disk problem. However, I do know that if there really IS a problem (like the drive letter going away), Limewire will fail every job and, so far, I have NOT been able to RESTART them. I have to reconstruct the searches (if possible, not always easy) and redo the whole thing, even if it was 99% downloaded as is usually the case (because the failure occurs most often when trying to move the file from the "incomplete" directory to my designated "complete" target (ironically, but sadly, BOTH directories are on the same drive yet one fails while the other works; smells like a Limewire weakness/vulnerability if not a bug. In any event, PLEASE LET ME RESTART "DISK FAILURE" JOBS from the point at which they left off.

If I can recall other bugs/disatisfactions I will post them. I appreciate your efforts, but as someone else said, "If I had paid for this I'd be royally pissed". I will probably go back a version but will struggle with the current one a little longer first.

Regards, Greg

Really? That's great. One question though, if you don't mind my asking...

Why in the nine layers of Baator was this released to the public WITHOUT all the features?

You're digging your own hole there Aaron, and I don't know how much deeper you guys can go before you can't get out again. I will also be going back to 4.

(Oh, and to you lovelies who scream "She only just joined!", I've been a LW user for quite some time, but have never had any issues requiring use of the forums.)

Others like the change also and if you want to wait for "all of the features" to get released you sure can do that. Many people like myself like to try new things out, and you aren't always going to get what you want, at least not right away, especially when talking about LW 5.

If they wouldn't have released 5 until "all of the features" were included, we would be waiting til half way through '09 - end of '09, that's just my guess. The only things that are missing features wise are: ability to press enter in the library, skins, and being able to stop the next song from automatically playing. There also is performance issues, but that shouldn't take too long to deal with, at least let's hope so. Other than the features that i mentioned earlier, it's a great release and I'm glad that it was released. 😊

Install version 4. It uninstalls any version before installing itself. Saves you a step.

Count me in as one who thinks that the new version's skin 5.xx is far inferior to the 4.xx, especially, the variety of sorts possible before (progress or speed or name) is now gone; multiple selections of files to resume or try again, (shift click or ctrl click to select) is now gone, simultaneous viewing of both download and seach windows as split screen -- also gone.

Also, the interface was intuitive and obvious, not so now.

First interface upgrade that I find clearly wanting. Re think and integrate under the hood improvements to the 4.xx skin, please.

The problem I'm having is that there are a lot of corrupted files. I can't tell you how many times a corruption error comes across or a trojan virus. Very frustrating as to the quality of the downloads as well. Isn't there anyway to filter out the corrupted files so they aren't even listed as an option to download?

They are working on that right now. So far, about 300 of those widely spammed files are blocked globally and the team is working on ways to speed up the process of identifying and blocking them.

You could turn off the built-in player.
It's at the bottom of My Library in the Options.
I prefer Winamp myself, so I use it all the time.

How do I go back to Limewire 4.18.1, I do not like this version at all. It rearranged my library completely and also in 4.18.1 I knew exactly what were trojan files by their file size.

The download links for older versions are always available on the same pages as the current downloads.

I Like the new look, I have no dramas running it on XP Home and I love the new 'Turbo Speed' in downloading. Linked to the i-tunes is great for knocking out CD's,keep them boxes blue. Cheers.

The next release should be released on May 5th, because that's when the Windows 7 RC comes out 🍷

New homepage looks great. 😊

Post 100 ftw!

ditto on limewire 5

I'm with you. I like the old format alot better. It was easier to search for specific music by album title.

A link to older versions is on the download pages.

Skins don't work in LmeWire 5 yet.

Hi noeljardon,

Fortunately for you, that is all we did. Namely, change the UI. The core remains exactly the same (with improvements).

From the programmer's point of view, this is certainly true, I've found that the uploads, downloads work as before, but I'm not sure that the searching works with the same `_result_` .
 The virus handling is new, but as Aaron.Walkhouse said, we have to "watch and learn".

The problem is with "change the UI".
 From the user point of view, it means to change the "look and feel", but in fact there is much more now:

Many information is missing from the main search window (for example to see the result counts together, now we can get them one by one only), the search tab handling is so bad and tries to `_limit_` the user to make only 3 searches, the solution with the "more" button is so weak , heavier to get to Bitzi, heavier to block a user (only through properties), heavier to do (more step) a complete research, there is no renaming option in downloads, there is no table view for downloads, we can retry the downloads only one bye one , and many other missing or limiting function - another example to limiting the user: only ten simultaneous download , and many other missing things, about what not only me but many other people talked already here and in the bugs section.

I think this development was unnecessary and it would be the best to put LW5 in an archive, as Nullsoft did with Winamp 3, develop again LW 4 as LW 6, as Nullsoft made Winamp 5 from Winamp 2. Put into it some really good thing from LW5, for example the virus handling, refining searches (any views of files), make the searching better both in the Gnutella side, both in LW side.

If you have time, make the code cleaner, but with 100 % compatibility, without any change, what the user can see directly, but if the development will be faster, that's good for everybody.

If you don't do this, you could try to put everything into LW5 what you removed, changed (see before), and remove all the new limits.

For a user to go back individually to LW4, is a dead way.

But I am not a prophet. Probably many user will go back to LW4, as long as it will function, many user will go with LW5, and many user will not use LimeWire further.

I don't know yet what to do. My renew of pro gives me a half year to decide.

Watch and Learn - and see, what will change in the development.

jaceja10,

Absolutely. Please see this thread as a response.

<http://forum.limewire.org/showthread.php?t=5867>

As for paying for it and not being satisfied. When you buy LimeWire PRO, you can choose to download LimeWire PRO 5, or download LimeWire PRO 4.18. If you aren't satisfied, you can downgrade at no extra cost (in fact it comes with your PRO purchase). You'll still get all the value of LimeWire PRO, just in the older, 4.18 version.

That being said, please let us know what you guys are unhappy about in the forums and be sure to check out newer versions in the future. No software is by any means final.

thanks for everyone's patience.

No software is by any means final.*

thanks for everyone's patience.

And thank you for hearing us out (despite how irate  some of us are).

As they say: "For every customer that takes the time to complain, there's 4 that have quietly switched to the competition."

On the flipside: "Opinions are like A**holes; Everybody's got one and they're mostly full of sh**"

But FTR, is there a set date for the next version of 5?

LammyLammz,

Quote:

And thank you for hearing us out (despite how irate some of us are).

You're welcome. The development, design and business teams all use different technology products ourselves and we know any kind of big update can be tough to adapt. Big updates are easier for companies that don't have millions of users around the world 

Quote:

But FTR, is there a set date for the next version of 5?

There will be another update of 5 soon mostly containing performance (speed, etc..) updates and a few more improvements concerning sharing and some minor things that have been left out on accident. The next minor release we put out will mostly likely not be *drastically* different than 5.

That being said, as more time goes on, we are going to be monitoring all the data we have and feedback that you guys and others give us and make more updates based on that. We already have ideas of improvements for the future based on feedback for this release and based on new features that had to be cut from this release. Expect every version to get better than the last based on the feedback you guys are giving us.

It's not easy to just take everyone's feedback and just throw it into the next release because one person's feedback may contradict another person's feedback, or it may prevent us from adding a really useful feature in the future, or our deadline for a new release might just not be enough time to design and implement it...but we definitely hear you and empathize with your frustration; we've all had it ourselves with one program of another  Again, expect every version to get a little better than the last. Once we put out a new release, give it a shot.

thanks for all the help!

Where's the old limewire 4.18

Limewire 5 is absolutely horrible. I'm willing to admit I might not understand everything there yet but where's the ability to view bitrates? Where's the player? Where's the percentage downloaded information? Everything that i loved about Limewire is gone??!! Where's the Preview button? The only reason I downloaded 5 was because 4.18 wasn't connecting to the net anymore. Now I regret what i did. Is there a way to get back 4.18? There are just so many features missing on 5. I can't even get the songs to download? Seriously, it shouldn't be this difficult. I right-clicked on the song choice and clicked play. Nothing happened. That was a frikkin' half an hour ago.

I'm so depressed.....

Hi Gilly,

Sorry you're having a difficult time with 5.0. Most of the things you miss are still there, they've just been renamed a bit or possibly moved around a bit.

Bitrate: you can still see bit rate in audio searches. In the top right corner of the search there is a toggle switch to have search results shown in Classic View. If you right click on the table header there you can add many columns including bitrate.

In the download view, there's a See All button that will show the current state of all your downloads.

The audio player is still there, its just hidden by default until you start to play something. It will appear on the status bar and also in My Library/Audio.

Also we've made a bunch of changes and readded many features that people complained were missing. A new release will be out very shortly with those new/old features.

Thanks

Thank you Meverett. I have figured out a few more things on there. It's just such a huge departure from LW4.18 that it was like re-learning everything all over again. There's still some features I haven't figured out yet, some I can't find/miss, and I still miss the old face of Limewire, but I'm in a better place today than I was last night. 😊

Thanks for your help.

 the little guy

all in all im afraid to say im not a fan of limewire 5. I have only ben using it since 06 roughly and my partner bout early 08. we both had the free version and i have been saving up to get pro. (having partners though wen ur a student cost lots ect ect.) and with te hmany wonderous and shiny things out there in the world saving for a program which even the free version is amazing, just seemed hard.

anyway im on my partners computer reinstaling EVERYTHING as we had to wipe it due to a virus. **** u msn!!!! anyway i was dooing the usual of collecting my 101 disks along with downloading msn again (god only knows why) and limewire. I didnt pay much to the installer coz to be honest ive been looking at nothing eles but instaler after installer all morning since 7. so it was only wen LW opened up i looked at it and was like errrrr, what happened. I woke up a bit again and looked around realised there was an update.

Now im not unfamiliar with updates and normaly they scream yeay!!! so i firsth tought yeay as well, but i started tinkering even having a look at the really complicated tab in the preferences and i downloaded a few songs.

Jesus what an overcomplication. download a song hit this tab to see what ur downloading right click to preview only have this many, cant have that many diferent searches, and the list goes on. So now im thinking, bugger, if i cant get along with it then my other half wont, now i havent updated mione on my computer, its still lw4, but shes gona get miffed since i have (in our opinion) the better one.

Ive read through 90% of these posts, well ok probably only 60% and i see many people agrree. Now im not an **** who just scream either, i understand theres development phases and not everything fits to everyone.

SO i have faith in limewire to adapt and taken what is awsome from the orignal limewire series and add th fun quirkiness of th new one. i would love to see a similar if not exactly th same layout with the same listing of downloads and PLEASE put it back to Kb instead of MB, and have all the fancy looking buttons and improved antiviral software of the latest version.

As is such though i will use LW 4 till a new release, which tbh will keep me more on this site than it did befor. Just a shame its going to be so for the wrong reasons.

Final question is, The little man, where can he download LW4 BASIC without paying to downgrade his limewire. i mean i have a job and all now, and i could pay for it, but to pay for software to downgrade it just seems....silly. LW4 is the dogs bollocks along with the LW team, uve dona a lot. But please help me get rid of this bloody LW 5 and show me where and how i can get LW4 again for the little guy with no real money.

Blue

 **Happy litle man**

thank you very much, its things like this which is why LW will always be the greatest, coz no matter people opinion, u listen take it in and offer the solutiopn to suit individuals, i do look forward to seeing a LW6 or even some radical changes to LW5 but either way im happed and LW old or soon to be will always be my prefered choice

thanks LW team

I thought it looked really nice of how they redesigned the UI; good job Sam and other limewire developers 8-). You guys really have brought Limewire up to date in terms of the user interface 8-). However, I would tweak the placement of the components a tiny bit though.

Help! Version 5 Sucks!

It really does suck! Now I'm going to have to re-organize my entire library! I liked it just the way it was. Plus my whole windows music library is in limewire when I would much rather keep the two entities SEPARATE!! I'm not the best with computers but I thought if I just download the old version everything would be back how it was but instead my entire library was missing! I got really scared for a minute there! So I had to download version 5 again and I guess I'm stuck with it. If anyone knows how to get the old version back without ill ado PLEASE LET ME KNOW! If that isn't possible, help me with these other issues.

Thanks!
and BOOOOO version 5! not impressed limewire guys!

Hi Saevio and Eagle-Running,

You guys can feel free to downgrade at any time at <http://www.limewire.com/>. What specifics were you not happy with? As we mentioned in other posts, no software is final, so a lot of feedback we get from our users gets put into the next release...so be sure to check back in the future.

As for the Library stuff, when you first loaded LimeWire 5, you must have chosen the "Automatically Manage My Library" option. This adds files from certain directories into My Library but doesn't share any of them. Since there are no more shared folders in LimeWire 5, you can share (or unshare) any files you want from My Library. Again, by default, nothing new is being shared.

If you want to remove those files from My Library all together, go to Tools > Options > Library and remove all the folders you don't want in My Library. Chances are the folders that were there in 4.18 were:

My Documents/LimeWire/Shared,
My Documents/LimeWire/Saved,
My Documents/LimeWire/Incomplete and
My Documents/LimeWire/Store Purchased.

So if you want your Library to look just like it did in the old version, you can remove all the folders except the ones above from My Library.

Hope this was a little helpful and let us know any other problems you guys have.

i havent used it enough to say its crap or its great or anything but from first glance it seems faster to get what you searched for although the previous version where icould just hold shift and select almost all the songs on my little table below and click find new sources or osomething like that was removed as such is a littles disheartening. i do have a specific question tho being as in the old version where yo ucould search for in the individual categories (Audio, programs and so on) new files which i used quite often isnt able to do in the new version right?

i do believe tho that most of the complains are more due to this version being more advanced and specific than the previous meaning abit more to adjust to than usual.

You can select a category from the dropdown next to the search bar and choose whatever category you want. So if you want to search for a video, choose "Videos" and just enter any kind of info you want in the search bar and we'll show results that match it.

If you want to do a more advanced search, you can choose advanced from that dropdown to search very specific things. That being said, filling out all these textboxes isn't completely necessary in this new version.

Also, if you always want to search for a specific type of file (for example, if you're always using LimeWire to search for videos, you can set it so everytime you start LimeWire, videos is chosen by default). You can set this at Tools > Options > Search.

Thanks for the feedback and let us know any other feedback as you use the program more!

Oops, sorry, I misunderstood.

Go to Tools > What's New Search and choose the category you want to search for

Not thrilled with this "update"

Not sure what you guys mean by having only changed and "improved" the interface... from what I am looking at, the features that I liked and used are gone. To wit: when you searched previously, you got a window on the left that allowed you to filter by artists or album, so that the main window only shows the things categorized that way. I see you have made sure that we can organize the big window that way, but it doesn't eliminate the other items from view. That's a nuisance. The bigger thing though is not being able to filter through my current downloads. Used to be you could organize by status, by name, by what percentage was downloaded etc. Where did that go? I have discovered the "classic view" for search, where is "classic view" for download? Grouping them by downloaded, waiting and incomplete is not very useful at all.

Where can I get a copy of 4.xx?

Sorry folks but 5.xx sucks!!

Can someone give me a hint where I can find a copy of 4.xx? I unfortunately upgraded to 5.xx.

4.xx was infinitely faster than 5.xx, easier to use,

I have no idea if I am connected to a modem or broadband or T1 etc.
I have no idea of the bit rate/quality of the file,
I can see what I am downloading and on and on.

A file download with 4.xx took 33 seconds. With the new and improved and faster 5.x, 17 minutes and still downloading. Same file started at the same time. Wow, what an improvement.

Many thanks

GFH

FWIW, the download speeds of LW5 are the same as LW4. It is impossible to compare speeds between two different sessions, because the speed is always different depending on who you're downloading from, what they're available bandwidth is, etc... That's just the nature of p2p networks.

If you want LW4, there's a big link on bottom left limewire.com that says, "Get LimeWire Classic".

Thanks Sam.

For what it's worth, Both downloads were started at the same time, well maybe 1 second apart, from the same location, downloading the same file. etc etc.

So no the DL speeds are not the same. I understand the theory and concept of P2P networks, fact remains the 5.x dl took 21 minutes as opposed to the 30 seconds for 4.x.

I tried a whole bunch of trials and I got pretty much the same result..

Hi

You can get all the previous versions of LimeWire from:

http://filehippo.com/download_limewire/

FileHippo lists the current version of many programs, and most previous versions. In most cases, a change log is available, but not with LimeWire 😞

Nothing These are LimeWire software Internet discussion forum hosted on the LimeWire LLC website. In these forums, users express their concern regarding the abundant availability of child pornography and the fact that LimeWire LLC has done nothing to stop the problem. Again, LimeWire LLC is more concerned with filtering out companies that engage in advertising and anti-piracy efforts on LimeWire and the Gnutella network. The same methods and efforts could have been used for several years now to filter child pornography, copyrighted materials, and other private information that could lead to issues such as identity theft or threats to national security.

Nothing Can Be Done About CP - Really?!

After reading many, many threads all regarding porn and CP, I understand that Limewire are 'unable to do anything about it'.

But...when someone uploads something with a title like '10yr old girl cries while father ####'s her hard' and 'brother screws young sister until she bleeds - ***** must-see' or '15 yr old girl gang raped by 8 men - see her cry in pain' - surely then something can be done about it? 🤖

You don't need to report these people (although that would be the optimum action to take) but surely there is some kind of filter that can stop these kind of uploads being allowed to be put on Limewire?! 🤖

I have used Limewire for a while now and it's great for getting all kinds of downloads but when I think I'm getting something - especially when it's for my children - and I get porn, it is annoying but I can simply delete it and try again but some of the titles that I see are just grotesque and I can't believe that some kind of filter can't be put in place your end.

Sorry to add to your endless posts of whining and whinging but it seems that most of your 'postees' are not taken seriously enough. I don't know how acceptable this kind of thing is in the US but in England, it is totally not acceptable (you have replied to some people saying that 'the police aren't interested' and 'it's not important enough' - is that really true!?!). Over here, certain procedures are in place on our internet and if you constantly are seen to be downloading CP then you do get a knock at the front door (that is the job of a friend of mine) and my partner is constantly downloading music from your site but has now stopped as everything he has downloaded recently has been of the sexual/CP nature and he is concerned that he may be frowned on as a CP lover!

I hope this problem is resolved for all of us!! Thanks for listening! 🤖

There is a filter to hide adult content, and this would surely hide the title you have quoted. There are lists of words that included words like raped, 10yo etc etc which are available for download and can be entered into your word filter. These lists tend to include words like hardcore, ***** etc which you may not wish to exclude for perfectly legitimate reasons.

There are also a number of words known to pedophiles ... codes if you like ... and it would imo be totally counter productive to list these words or to filter them ... In either case those who did not already know these terms could discover them and use them, to search rather

than filter.....

I have had occasion recently to report a web site which showed clear images of child porn and before you ask, it was posted in the profile of a member at a forum I administrate, and the member duly reported and banned and the link removed. I reported this to <http://asacp.org/> and never had even an automated reply from them. And possibly to my shame I removed a bookmark for the link so I can not check if the site still exists. I did find it quite sickening to visit the site and so I removed it from my mind, and bookmarks.

As you have noted, removing such material from the Gnutella network is an entirely different matter than removing a website link from a forum.

I am not going to continue contributing to this subject and will only add this. I have never downloaded porn of any sort unwittingly.

To manage to download cp when downloading music is not something I can explain. It is impossible afaik.

If you are going to download Video right click on the search result>advanced>look up with Bitzi

oh and remember that when you installed Limewire you chose the option "I will not use LimeWire for copyright infringement"
.....

Patience Is A Virtue! Hell No.... With Computers It's A Necessity!

but shouldnt there be a compulsory filter as well to hide this stuff?! its all well and good saying, 'just add this to your blocked key words' but what about those out there who are using limewire to look for it specifically? i dont understand how this is still even in question.

Accidentally Download CP - BEWARE!

I downloaded limewire several years ago so that I could obtain graphics software for learning purposes. I also used it from time-to-time to download some music files. Limewire went unused on my computer for a couple years but I recently opened it up. As ashamed as I am to say, I was looking to download some porn images ... the legal kind!

I've never been much for porn but in the past year, my physical relationship with my wife has dwindled. So the options I was left with was to cheat or self-gratification. I chose the latter but over time even that became boring. So I sought out some visual stimulation over the Internet, but I ran into a problem of viruses and spyware so I opted to check out limewire.

I started of looking at a few images using some very specific search criteria just to see the quality of what I was getting. After downloading a few, I was getting impatient with the slow downloads. So I made a big dumb *** mistake. Call it naivety or simply lack of experience using limewire.

Because I am an efficient type of person by nature, I decided to do a few broad searches, select multiple files and leave it to download for a while and come back later. HUGE MISTAKE! I launched 3 search queries using the terms "porn", "nude" and "XXX". I sorted them by bandwidth and selected to top 100 or so from each query. I didn't even bother to look at the file names.

I clicked the download button and walked away. I came back a few hours later to see what had happened and found about 100 images had downloaded successfully. I killed all downloads that were either in progress, waiting in position, etc. Went to my download folder and began opening up the images. The first couple were fine although one was a not-so-attractive female. However about the 5th image was ... you guessed it ... a completely nude girl that looked about 12 years old. Needless to say I was shocked and immediately deleted the image. A little rattled by what I just saw, I used the preview program on my computer to quickly click through the images and I was completely taken aback by what I saw. About ever 3rd or 4th image was CP.

I got that "OH CRAP" feeling in the pit of my stomach. Of course every possible disastrous scenario ran through my head in a matter of seconds. I just knew FBI was going to knock on my door any second now.

Once I gathered my thoughts and came to the realization that these files had been sitting in my shared folder for several hours, I panicked and deleted them all without even viewing the rest.

I then proceeded to uninstall limewire and removed any trace that limewire had ever been on my computer or as much as I could. I then did a search of my computer's HD using *.jpg. I found remnants of more images in an obscure folder called "Incomplete" that was not removed during the uninstall. After getting that "OH CRAP" feeling again, I realized that getting rid of these images might be a little more difficult than I thought. I spent the next few hours deleting anything and everything that had to do with limewire, the images, and even went into my registry.

I knew from my computer knowledge that when you delete things off your computer, it really is not "deleted." The space is simply reclaimed as free space and the residual data remains intact until it is over-written by more data. I sought out and download a program that supposedly cleans all free space making it unrecoverable.

So was this enough? Who knows! I am still very paranoid considering this happened only a few days ago.

You may be wondering by this point, why didn't I contact the authorities? Because one, I was embarrassed for having to resort to downloading porn on the internet to get my jollies and the obvious stigma related to that. Two, I did not want my wife to know that I had downloaded porn legal or otherwise. And three, there is a witch hunt mentality in this country on child predators and after reading

some of the stories of people busted for "accidentally" downloading CP I opted not to report it.

If there were a way to anonymously report it then I likely would but even then, I'm not sure it would do any good because I didn't see where or from whom these images were downloaded. I went to the cyber tip line for the Center for missing and exploited children and their tip form asked for my name, address, and knowing the government, they would likely grab my IP address and track me down anyway. At this point they would probably get me on distruction of evidence or something stupid like that.

This is no doubt a disgusting world but to get involved would leave myself open to scrutiny by not only law enforcement but also by my family and peers.

I feel like the only option is to do my best at creating as much distance between myself and this incident as possible and hope that it does not come back to haunt me and possibly ruin my life.

What would you do?

I will never use limewire or any other P2P program again simply because the risk involved. Most of what is available for download is illegal anyway be it CP, music, movies, or software. Needless to say, my school of thought on the idea that someone could accidentally download CP has changed and the lessons learned are plenty.

I would like to here other thoughts on this situation. Should I go to law enforcement?

No. They won't be interested at all. They wouldn't want to arrest you for it, and you can't help them track it down anymore since you deleted everything.

Defrag your disk to scrub out the remnants of data and don't go to any kind of P2P for porn anymore because it's mostly crap or spam.

No big sweat.

There are only 2 places you'll find anything you downloaded. Your shared folder (or wherever you send your downloads) and as you found out, the Incomplete folder. When you installed, It probably left that folder there cause it didn't want to erase something you downloaded, wanted to save, and might have left in there inadvertently.

Unless you downloaded a Trojan/virus, the only harm done was to your brain on seeing a naughty pic. Since it didn't make you want to wear a raincoat during a summer heatwave, your still a healthy hetero with fully functioning morals.

As long as your mother-in-law couldn't access your files using Remote Desktop, you will still get a Fruitcake and some Old Spice aftershave at Christmas. 🤪

In the future, I'd set up limewire to download to a separate folder, mine is called Downloads. It's in my Limewire program folder. Set your CPU so downloaded files & Partial downloaded files aren't shared. This way, you can check out your downloads for content, correctness and class. No one can see it till you see it and decide on the proper way to handle it.

Don't worry about guilt over wanting to view, men have been admiring the female form for a looong time. 🤪

being cautious

I think a lot of posts have been made about similar situations. It has left people scared to death about police knocking at their doors with arrest warrants. Like most of the admin's have continously mentioned you need to be aware of what you are downloading, about a month ago I ran into slightly different but similar situation(I wasnt sharing any files, but a few downloaded and i was able to stop some others that had started, I don't know for sure if they were..but they had names that made me not even second guess what they could be). I was scared shitless, I still am a bit worried, but its been a month and nothing so far. I am curious if anyone.. especially people who have posted.. from like months or years ago with similar stories if they have had anything happen to them?

Its a scary situation, and we as users have to be more cautious about what we download.

In turn I have uninstalled Limewire, not because I think Limewire sucks, but because for my own sanity I couldnt bare to have another misfortune. I really liked using Limewire for music downloads mainly.

Anyways just another word of caution for all users out there. Don't make mistakes, and read what others post about filters etc. I wish I had even known about this site.. or any of that crap before it happened to me. But thats how the cookie crumbled.

Be aware and be safe in your downloads and searches.

Any advice to put the rest of my somewhat settled mind at ease.. and for others who have experienced similar situations?

If the cookie crumbled, make crumb-cake....or bake another batch of cookies.

With a good Hostile List & filter-blocking for unwanted file extensions, the percentage of Crud you will have to sift thru will be greatly lessened.

Filter-blocking porn-type words as a part of the file-name will save you from opening unwanted porn, but at least those files are honest in whats inside them. We'll, honest as long as it's a nudie JPG and not hidden Malware.

It never hurts to set your folder options to "see hidden and system folders". Just take care on deleting in your windows folder. Also unchecking the "hide known file extensions" will let you see what type of file it is. Sometimes someone will put a file extension as part of the name. Example, the next file name looks wrong, but it's a legit name.

Not_Porn.jpg.exe With the .exe extension normally hidden, all you'll see is Not_Porn.jpg.

Rem, people can change the name of the extension very easily. If you do, Win warns you that doing so might make this file unusable. It will then have a new looking icon, one that looks like that type of file with that extension.

thanks for that info. I am quite aware now of all the possible dangers you COULD encounter. I deleted all that crud within minutes of it even downloading (fast download speed). I just felt it necessary to remove any remnants of Limewire, just for me. I also like to use Utorrent a lot anyways.

My boyfriend was really helpful with it all and just reformatted my computer, I needed to do so anyways I hadn't in about two years! All I was saying before was I actually had no knowledge about filters etc until I read posts on these forums. I think these forums are good, help users educate themselves before installing or using programs like Limewire etc. Otherwise I would have never known, I know that sounds naive or whatever, but I just downloaded Limewire like two and half years ago using it whenever I wanted a song, not thinking a thing about some of the dangers associated with it (virus's etc)
Hopefully more people read them so they dont encounter what a lot of people have.

I too would like to hear from others who have accidentally downloaded material that they didn't want. I would like to hear what happenrd to them. I know a lot of people new to limewire aren't aware of the potential dangers associated with these downloads whether viruses or sick child porn. I'm aware limewire can't censor this but wish you could somehow especially for the new people. The law in Canada does allow for people to be 16 yrs. old however I personally think that's still too young to be having sex with an adult. I personally feel that the law should be the same as the U.S. at least 18 yrs. old.

I too would like to hear updates. Because last month I was downloading what I thought was a legal adult movies and when I previewed them halfway through I saw it was kp. Needless to say I deleted them but everything I've read here has me extremely scared and paranoid. I keep hearing the only way to truly rid something from your hd is to destroy the drive itself. I was in the market for a new computer anyway and from all I've read I'm tempted to just destroy this one and go ahead and get a new one. Any thoughts would be appreciated.

I don't think you should destroy your entire harddrive, I think thats being a little paranoid. AND if for any random reason something did happen, which to the best of my knowledge wouldn't it might look more suspicious that you tried to destroy it. However, a lot of people do when getting a new computer due to other getting a hold of information still left on your harddrive.

If you delete the stuff out of recycle and do not the quick version of reformatting it should suffice. It rids any trace of unwanted files off of your harddrive, yes not completely, BUT if they were to take your harddrive in the event of seizing your computer they would find slight traces, BUT for them to even seize your computer and physically take your harddrive apart they would need WAY more probable cause then a couple of accidental downloads which were deleted almost immediately.

Unless you were constantly downloading and more importantly UPLOADING illegal pornography, then you might have cause to worry about being on the police's "radar".

It is highly unlikely that at that exact moment that you downloaded something accidentally, the police were like "yep this guy downloaded some stuff lets get him". These cases are very serious, but require investigation before criminal charges are even laid.

I clearly am not the law and I dont know for sure, but after talking and reading extensively about certain cases, more than the majority of the time they would investigate any allegations or suspicions before coming to your house or something.

I might be talking out my ***, but I guess some of it is personal "opinion" i suppose. My father works as a Correctional Officer, so I like to think I have some insight after lots of conversations etc.

This is not to say that this is how it is, but we as users have to be very careful and aware of what we download. Thanks to these forums I hope it informs people of possible dangers when downloading videos etc. Its a risk you take but downloading videos and porn. Unfair yes, but a reality. Be safe and user conscious.

(long post sorry)

(long post sorry)

Thank you for your input ophelia. Today I called the national center for missing and exploited children and asked them for advice. All they said was to file a report with them, either anonymously or with my information. I felt a little less than satisfied with their response so I called my local police station and they told me to call back tomorrow when a detective who works specifically in these matters is in. What I told the NCFMAEC and what I'll tell the detective on the phone tomorrow is what I am most afraid of was that if that file was part of some sting operation, I doubt they'd believe me and would just throw me into a general category, like in this article

thanks hobo! 😊

and skribz: I think it was very admirable for you to contact the necessary people that deal with these issues. However, I dont know how much of help you will be to them.. for the mere fact you have already deleted the material in question. If it happed last night persay and you immediately contacted local authorities, they could tell you to write down the name of the video.. time etc and how to get rid of the material properly. But since it happed last month as you said..and you deleted it, you cant really provide them with much information, other than that there is illegal pornography on Limewire, which they most likely already know. Maybe you contacted them, to lift a sense of relief off your shoulders, which is completely understandable. But like I said I am not sure how they will go about dealing with your call, if they do at all. Let me know how it goes, interested.

In regards to the article you posted; that's a really good thing though that they caught those people. After reading it though, these people were actively being investigated in their community or wherever, and were actively downloading, uploading, distributing, and KEPT the material on their computer.

They found images/videos on their computers. If they took your computer or whatever, they would find nothing on yours. They would need more than an accidental download to put you in jail, way more. And if they took you in for questioning or something, you could explain yourself. How can they charge you, for something that's not even in your possession? And wasnt for more than a couple of minutes or seconds or whatever it was. Its still a serious accusation. And if it helps you sleep at night to be in contact with the appropriate authorities, then do what you need. Just try to relax, and know you didnt do it on purpose, and you got rid of it before it downloaded fully.

Well Ophelia, I spoke to the detective the other day and didn't receive too much valuable information. He said he wasn't too familiar with limewire operations, and that the feds are the ones that usually monitor it 24/7. What made me very uneasy was he said no matter if it was an accidental download, if the file was part of a sting, they will come down on you. And just as another kick in the butt, the detective reminded me that no matter if it wasn't fully downloaded, the data stays on your computer. So I came home and tried to defrag my computer, I'm not the most computer savvy person in the world, and to make a long story short, I couldn't properly do it and couldn't get it to start up again. I need to use my computer everyday for work and school so I had to go shell out 800 bucks for a new one.

I know how you feel, instead i got one of those "your IP has been logged" things.

I felt extreme guilt at back of my head, i didn't know what to do. I feel the shame even today.

Edit: GOD ****, SOME ***** was playing prank on me. I found the source of it and traced their IP adress, if wasn't even KP.

Found it. It was some sort of scam, <http://busted.sal3m.com/> . Is anyone familiar with this?

i was just doing the same thing except with a movie and downloaded several at the same time and when i finished downloading them one of them was kp, i was so disgusted that im never going to risk this again and delete limewire permanently. i still feel sick and extreemly shocked over it because it is nothing i have ever encountered before.

update: just to let you know your probably ok. i have talked to a friend who knows much on the subject and he told me the people targeted are repeat downloaders who have a history of downloading it and more importantly uploaders.

Just delete...

Contrary to a lot of belief about possession, and a lot of interest and buzz about the FBI, etc, using computer forensics to resurrect deleted images, etc, all you have to do is delete the offending images. Lawmakers realized that in this day and age, it's way too easy to accidentally view images you weren't purposefully trying to see, and it would be ridiculous to send people to jail who truly tried to get rid of it. A deleted image is not the same as an normal, available image. True, it doesn't remove the data from the hard drive always when you delete things, but to a normal person under normal circumstances, the image is gone and inaccessible.

Here's the exact wording from the US Code, Title 18, Chapter 100, Section 2252:

- (a) Any person who—
- (1) knowingly transports or ships in interstate or foreign commerce by any means including by computer or mails, any visual depiction, if—
 - (A) the producing of such visual depiction involves the use of a minor engaging in sexually explicit conduct; and
 - (B) such visual depiction is of such conduct;
 - (2) knowingly receives, or distributes, any visual depiction that has been mailed, or has been shipped or transported in interstate or foreign commerce, or which contains materials which have been mailed or so shipped or transported, by any means including by computer, or knowingly reproduces any visual depiction for distribution in interstate or foreign commerce or through the mails, if—
 - (A) the producing of such visual depiction involves the use of a minor engaging in sexually explicit conduct; and
 - (B) such visual depiction is of such conduct;
 - (3) either—
 - (A) in the special maritime and territorial jurisdiction of the United States, or on any land or building owned by, leased to, or otherwise used by or under the control of the Government of the United States, or in the Indian country as defined in section 1151 of this title, knowingly sells or possesses with intent to sell any visual depiction; or
 - (B) knowingly sells or possesses with intent to sell any visual depiction that has been mailed, or has been shipped or transported in interstate or foreign commerce, or which was produced using materials which have been mailed or so shipped or transported, by any means, including by computer, if—
 - (i) the producing of such visual depiction involves the use of a minor engaging in sexually explicit conduct; and
 - (ii) such visual depiction is of such conduct; or
 - (4) either—
 - (A) in the special maritime and territorial jurisdiction of the United States, or on any land or building owned by, leased to, or otherwise used by or under the control of the Government of the United States, or in the Indian country as defined in section 1151 of this title, knowingly possesses 1 or more books, magazines, periodicals, films, video tapes, or other matter which contain any visual depiction; or
 - (B) knowingly possesses 1 or more books, magazines, periodicals, films, video tapes, or other matter which contain any visual depiction that has been mailed, or has been shipped or transported in interstate or foreign commerce, or which was produced using materials which have been mailed or so shipped or transported, by any means including by computer, if—
 - (i) the producing of such visual depiction involves the use of a minor engaging in sexually explicit conduct; and
 - (ii) such visual depiction is of such conduct;
- shall be punished as provided in subsection (b) of this section.
- (b)
- (1) Whoever violates, or attempts or conspires to violate, paragraphs [1] (1), (2), or (3) of subsection (a) shall be fined under this title and imprisoned not less than 5 years and not more than 20 years, but if such person has a prior conviction under this chapter, chapter 71, chapter 109A, or chapter 117, or under section 920 of title 10 (article 120 of the Uniform Code of Military Justice), or under the laws of any State relating to aggravated sexual abuse, sexual abuse, or abusive sexual conduct involving a minor or ward, or the production, possession, receipt, mailing, sale, distribution, shipment, or transportation of child pornography, such person shall be fined under this title and imprisoned for not less than 15 years nor more than 40 years.
 - (2) Whoever violates, or attempts or conspires to violate, paragraph (4) of subsection (a) shall be fined under this title or imprisoned not more than 10 years, or both, but if such person has a prior conviction under this chapter, chapter 71, chapter 109A, or chapter 117, or under section 920 of title 10 (article 120 of the Uniform Code of Military Justice), or under the laws of any State relating to aggravated sexual abuse, sexual abuse, or abusive sexual conduct involving a minor or ward, or the production, possession, receipt, mailing, sale, distribution, shipment, or transportation of child pornography, such person shall be fined under this title and imprisoned for not less than 10 years nor more than 20 years.
 - (c) Affirmative Defense.— It shall be an affirmative defense to a charge of violating paragraph (4) of subsection (a) that the defendant—
 - (1) possessed less than three matters containing any visual depiction proscribed by that paragraph; and
 - (2) promptly and in good faith, and without retaining or allowing any person, other than a law enforcement agency, to access any visual depiction or copy thereof—
 - (A) took reasonable steps to destroy each such visual depiction; or
 - (B) reported the matter to a law enforcement agency and afforded that agency access to each such visual depiction.

Note the valid defense under subsection (c). Also note that both standards under subsection (a) require that you *knowingly* receive the materials. So it is a valid defense that the images showed up in a general search using common strings like "porn", and you accidentally downloaded them. That kind of defense would not apply if you knowingly subscribed to a Yahoo! group, or specifically searched for "child porn" or "*****" in Limewire, etc etc.

Section 2252A, which covers kiddy porn more directly, is similarly structured. In short, if you're not specifically looking for it ("knowingly" is the key word here), you shouldn't have anything to worry about if you honestly deleted the images. That's not to say you might not have a tough fight in court if some gung-ho agent decides to come after you, but generally speaking, don't let it bother you too much, it's not your fault.

The Notion that No One cares and Don't Worry about it is CRAP! Read on!

Dude reading your post and then reading the exceptionally accurate response that you no doubt discounted immediately made me stop and wonder how many other people out there just like you think they are somehow invisible sitting in their dark bedroom looking at their screen. You have no idea at all how badly the pendulum has over swung the other way on this issue. This is the crimen exceptum of our era and if you think

for one second that they aren't serious as a heart attack then you need to turn off your computer and unplug it from the internet ... and only then with a clean new hard drive are you safe from the current witch hunt that is taking place in our country by the tough on crime ...throw away the key ...save the children people. Before you stop reading this post considers the following:

1. You don't have to even download a possible illegal image ...just clicking on a link that advertises an illegal image is enough for the feds to march into a judge's chambers and walk out with a search warrant for your computer. Oh but it gets better ...you could have simply clicked on a spam email with a link and a promise or statement of what you will find at the end of it ...and that link could have been sent to you in broadcast style hundreds of thousands at a time ...by the FBI!...

Code:

```
http://www.attorneysonyourside.com/FBIEntrapment.html
```

and while the link says entrapment and while the popular thinking says entrapment ...the federal judges who have seen these cases have all said ...no! ... read this link about a Phd Candidate who clicked on the link then had the feds at his door with guns out and flash grenades going off throwing him to the ground ...taking his computer and finding nothing and a jury of his peers finding him guilty of "Attempted possession" and where is he now? Finishing his Phd unmolested?? Nope ...Club Fed for 4 years getting molested..his life is ruined ...he is now a sex offender for the next 15 years will never get a decent job or have a normal place to live...and his teaching days are over because he can't be around anyone under 18! That's right ...

2. Consider that 90% of the CP in the world today (on the net) is put there by the Govt.!

: ""In our time, the police create crimes. And that is why the US prison population is twice the size of China's, an authoritarian country with a population four to five times larger than America's. Americans are more at risk from the police than they are from criminals"

3. Consider the recent case of Arizona v. Morton Berger... Award winning High School teacher ..father of two great teens, husband for 30 some years, never had any run in's with the law for anything other than a speeding ticket ...56 yrs old ...he was curious one night like you and he leaves his credit card on the wrong website he was trying to see ...so for that part ..he did do the crime ...and he downloaded some images ...after the forensic people finished dredging his hard drive with a fine toothed comb they came up with 20 images that they could put back together well enough to be able to make out under 18 teens who were not engaged in any sexual acts but were posing naked in sexually provocative poses ...they charge him with those 20 countsa jury of his peers convict him of those same 20 counts ...do you know when the first time he will be eligible for release will be ...including from executive clemency and/or pardon (which he is statutorily barred from ever getting ...along with any type of good time opr early release...??? anybody?? ...200 years from the day he went into prison!!.. He appealed ...AZ Appeals court says ..no thats not cruel and unusual! AZ Supreme Court says ...Nope that doesn't shock the public conscience. (yeah right!) so it goes to the US Supremes and what happens ?? they refuse to even hear the case.. No kidding ...In 3 states he would not have even been prosecuted ...in AZ even he would be out if instead of downloading those 20 pics if he would have instead kidnapped an underage girl ...raped her and killed her...that would have gotten him back to his house and family in 20-30 years! Feel safer? ...

4. There are more people currently serving huge long sentences ...most of them had mandatory minimums of 5 to 10 years ...than the total number of underage victims they have been able to identify who were forced to participate in the making of these images. ..in the next 10 years that number is supposed to rise to 20 times (people in prison vs. victims) ..These people made a mistake ...guys like Morton Berger I am sure (with no criminal history at all) would have been cured of his curiosity doing 200 days (or less) Not 200 years without parole ...oh and there was no evidence that he ever sent them to anyone ...or was an actor in any of them ..or did anything except download them ...then delete them ...and then wash his drive ...which tells me he had already beaten himself up with a guilty conscience already ...

5. This crime is just like the Stalin show trials and just like the witch trials going way back in our history ...guilty simply by being accused ...and guilty of a crime that is so volatile that once you have been accused ...you have no friends in the world and nothing else you have done to make this world a better place matters at all to anyone ...and you can't even really defend yourself against the indefensible ...who in their right mind is going to defend what he did ?? ... everyone agrees that its an outrage ...everyone agrees that it needs to be stopped if possible ... and the people who produce these images should be punished severely ...but there is no one in any country today that is being punished worse than 20 images Morton Berger!

"One of the greatest delusions in the world is the hope that the evils in this world are to be cured by legislation". - Thomas Brackett Reed

6. The fight against this scourge is a Huge Huge bureaucracy ...quoting figures from an FBI report...

"there is now a huge bureaucracy, stuffed full of people, employed in the 'industry' and it would be politically very difficult to get rid of them. In addition to the estimated 50,000 police officers, there are also a similar number employed in the FBI, customs etc. And that is not counting the huge numbers of people in the charities and NGOs (there are 21 NGOs operating in Bangkok alone). Conservative estimates put the total number of people employed in the industry at over 250,000, with dozens more joining every month. Contrast that number with the 2,000 kids that have EVER been abused to make child porn.

It is precisely for his reason - not the mealy mouthed excuses trotted out by the politicians and the rest of the bureaucracy about viewers becoming doers - that the laws have become increasingly more restrictive, creating an ever-widening circle of images, even text, that fall within the prohibition; and is the reason why simple possession has been ramped up to become a crime exceptum. There are just not enough people making the stuff to justify a bureaucracy of this size, so they had to find other targets to justify the massive expense. Just like with drugs - which after all were only criminalized to provide employment for the army of people employed during Prohibition - a juggernaut has been created that the politicians will have problems stopping. Yet even now, with some political will, it's not too late.

There is enough argument on this web site about the reality and extent of child pornography without repeating any of it here, but suppose we look at it from a different viewpoint. We have had moral panics before, each of them resulting in an inquisition of one kind or another. The best remembered are the original witch hunts, the demonizing of the Jews, the 'crime against nature' of homosexuality, the Reds under the beds, and, more recently, the pedophile rings and satanic ritual abuse scares. It may be difficult to recall a time when there was not a moral panic and an accompanying inquisition about some designated perversion.

one result of the a priori bias that accompanies moral panics and the absolutism they engender is "therapeutic jurisprudence". I see a version of this as 'legislating for malice'. Courts routinely act not in the service of justice, but in maintaining and enforcing the ideology of society. What results is a society of fear and maliciousness, where neighbors spy and report on each other, and where police engage in scams and entrapment, and prey on innocent people who may be ensnared by other means also.

Let's look at the new threats to freedom and innocence brought about by the child pornography absolutism. I could have risked accusations of exaggeration had I said two years ago that no one who owned a PC was now safe. After first hand contact with people whose stories are told on this web site, I can now say with some confidence, and much sadness, that I believe that no man who owns a PC is safe, whether the threat be from teenaged sons and their friends, Trojan Horse intrusions, spams, set ups, viruses, accidental access or misjudgment concerning what constitutes pornography. The result is that the Internet is being viewed as a threat rather than the great facilitator of the emancipation of the human imagination it should be.

If you have read this far and think that you are safe in front of your computer please know that if you are doing these types of things then the most unsafe place for you to do it is in front of your computer...even if you download something by accident ...its a strict liability world we live in ...and if it's there ...you are guilty ...and that includes pictures in data format that are stored without your knowledge and even if you did know and can prove that those files have never been opened ...you are still going to do 5 yrs ...no parole at club fed as a mandatory minimum...the precarious nature of any of the civil liberties we have left is way beyond being worse than you can imagine ...do some reading ...stop breaking the law because your life will be destroyed and it will be destroyed very thoroughly and expeditiously ...by well meaning men and women who could care less about your life or if it ends today ! ... after reading through a bunch of what's actually happening and referencing the actual cases to make sure it wasn't just fear mongering ...I connect my computer to the internet twice a day for a few minutes to get my emails ...The system, is broke people ...and we are letting it happen ...think this stuff happens to everyone else but you ...wait until the flash grenades go off at your house at 5am and you are introduced to what we call our criminal justice system ...then don't say you weren't told

 Same problem

I live in the UK and I've had the same problem.

A few times now I've selected loads of porn files to download all at once, cuz you never know which ones will work and which won't. And even when you have a file downloading it takes ages to download anyway.

Dodgy C.P. sounding file-names kept coming up and i just went through and deleted them all everytime. I presumed they were spam, but didn't click to find out!

Today however I saw a disgusting C.P. image that was under a file name that didn't have anything to do with C.P. It disturbs me to think that stuff is on my computer. I've deleted Limewire and am thinking of wiping the hard drive - it's like it's tainted now.

I think I'm going to go to the police. People on this forum say they don't do anything about it. But that all seems to be in America, maybe the police in UK don't know this stuff's on Limewire yet, maybe they can do something about it.

Why doesn't Limewire get rid of this stuff? Or at least warn users - I'm worried the police are going to knock down the door now!

Brother Accused Of Child Porn Through Limewire

Hello,

My brother is 25 years old and recently 3 detectives took my brothers computer. He accidentally downloaded it and left the computer running without and sharing it. Now hes charged with two accounts of possession and distribution of child pornography. His bond was set at \$100,000 which my father had to put the house on in order to released him from jail until the court date. The worst part is that 2 detectives went down into the basement alone and had him write a written confession. Saying that if he signs, the charges wont be as bad but if he doesn't, then he would be put in hand cuffs.

I don't even know what to do anymore. Is it really that easy to accidentally download child pornography on limewire?

CP: Risk and Consequences, incidentally downloads

CP: Risk and Consequences, incidentally downloads

Now, now folks just don't panic.
Of course, CP is as very bad thing, no second mind about that.
But never mind whether you use LimeWire, µTorrent or what ever P2P software to download anything, there is always the chance that you end up downloading - incidentally - some porn, even worse, CPs.
It has - I guess - did happen to almost anybody meanwhile and I'm no exception of that rule. But instead of push myself into panic or even worse a high degree of paranoia I

just either simply kill the file and that is it, or -
depending on the material - I might even pass it on to the
police div. in charge of things like that, providing them
with the IP, date of download or offer of the file and just
ask them to take proper action vs. the one who is
responsible.

If anyone is to scared to do just like that, those could
send it to any child protecting agency or league against
child abuse. Depending on the state or country you are
living, names and/or organization vary.

You are certainly not committing a crime by very
incidentally run into a file of CP. To make it a crime would

have to fulfill at least the two basic requirements:
a) confirmed physical (mental) elements of the offense,
b) confirmed objective elements of the offense,

meaning, you have (had) the intention to search, download
and possess CP material intentionally (even for your
personal use only), furthermore, that have been fully aware
of the fact, that such material is illegal and hence a
crime.

If one of those two (legal) elements is missing, no case.

Just do not keep such intentionally downloaded material an
your PC and if it happen to be unknowingly been downloaded

by you, just kill the file and good.
Good advice would be, don't download things and go on your
annual vacation while your downloads are running - lol. Best
thing, you stay close by and keep an eye on things are
downloading.

As far as you belong to the worrying kind, there are even
certain softwares that would destroy any file to an extend
that even the russian secret service couldn't reconstruct
that file :-). You might for that like to take a look at
speedbit.com. Such tool comes along with the pro version of
their downloader software. For rather small graphic files
the freeware version of it would do as well.

So once again, just don't blow your head off for
incidentally downloading some CP file.

I myself just last night run across a very bad piece of CP
file. It claim to show how a 3 year old girl being raped. Up
to now I just took a screenshot of the download directory
where the file is being offered for downloading at LimeWire
and will decide today which action should being taken (i.e.
downloading the file for the purpose to pass it on as well
to the feds). In that case I might as well notify the
provider the IP belongs to.

@accsd:
well, I don't have to tell you that your brother acted very
stupid when he confessed of committing a crime in that
regard, because the police officers about pushed him to do
so by making fictional promises.
Without such downright dumb confession there would be
nothing they had have - but under the circumstances now ...

I hardly can believe it!
Better make sure that brother of yours gets an able lawyer
to pull him out of that kinda ****. Better for him to revoke
the confession on the same grounds you've stated in your
posting. And I say this only taking it as a fact, that your
brother is not guilty of the charges intended by the police
(of intentionally downloading and storing CP material for
further uses).

Now folks, I just hope that this short excursion into CP and
legal consequences might be able to get you down on solid
ground again.

Remember: don't panic - nothing gets eaten as hot as it got
cooked.

Sharing is the joint use of a resource. In its narrow sense, it refers to joint or alternating use of an inherently finite good... It is also the process of dividing and distributing. Apart from obvious instances, which we can observe in human activity, we can also find many examples of this happening naturally in nature. In a broader sense, it can also include the free granting of use rights...
<http://sneakcentral.com/index...>

Don't be a Freeloader - share within your means.

They only go after the people who share it.
Because they have no access to the servers they cannot see what you searched, what you downloaded and when you did it.
If you read the cases in which people were caught, it clearly says the Officer downloaded the files from the accused.

You can however download files from officers which is terrible too.

Its happened to me many many times and i have usually deleted the files before they are completed. But occasionally i have walked out of my room and they finished.

I do not share and i never did. And its been happening to me for about two years now, nothings happened. Some of the stories posted are made up to make you scared, if your really paranoid destroy the Hard Drive, but other then that live your life.

How do we actively fight against CP

I don't know about the rest of you but I am the father of a 2 little girls and a boy. As a father I am more concerned with the fact that perverts are using Limewire as a medium for sharing child pornography. I am furious that this much discussion is taking place about this topic and no one is taking any action against these degenerates. Let's take this even one step further, those of you who have taken the time to respond on this forum i commend you, but is just saying something about it really going to make a difference. Those of us who wish to protect our children from the filth that wish to prey on them should draw a line in the sand and actively hunt for these pedophiles. The longer we stand by and just talk about this problem, the longer these sicko's have to sit around and actively hunt for material that exploits the lives of children that are to weak or naive to defend themselves. Some of you might be thinking that I'm some nut that is just running off at the mouth about a problem that is too big for us to do anything about, or concerned that even though the cause is just, taking actions like hunting these freaks down leads to authority figures instituting a Orwellian style government. I obviously disagree with these points of view. I think that if those of us that are the majority should stand up and address the issues that affect us on a daily basis, rather than stepping aside and allowing some minority issue take the forefront for the sake of recognizing the "little guy"(normally some staged event put together for the benefit of some idiot jacknut's political campaign with the disguise that it's helping the fight for the "little guy" e.g. the hispanic rallies during the beginning of the presidential campaign's) With all this being said (and before I go and offend anyone else) the task at hand here is looking out for the welfare of all of our children. I propose that a website be made specifically for reporting users that share child pornography. If anyone knows of a website like this that already exists PLEASE post the URL on this forum. Let this be a warning to all pedophiles that are downloading on Limewire, if no one else will, at least I'll be looking for you sick losers, and when I find you, there will be no way to measure the joy it will bring me to watch you rot in a jail cell. Why don't you just save us all the time and pull a Dateline, go home and shoot yourself in the head.

I've seen a few of these posts throughout these forums, and frankly, I find them incredulous.

It's been about 40 years since the pc has hit the market... I find it hard to believe that common layperson is not computer savvy even to a small degree.

Or even familiar with basic law.

(dare I ask) did the police present a search warrant specifically requesting the computer? Was the computer in plain sight from the door? If the police were allowed in, did they have permission to go to the room the pc was in? When they found the PC, was it turned on, and was the file right there on the desktop?

They just can't snoop around without specific permission, or unless it is detailed in the search warrant.

I'm no lawyer, but I believe these issues are covered by the fourth amendment, and has decades of case law. But I could be wrong. I've been wrong before, like when I was sure EVERYBODY knew not to admit to anything, or talk to anybody without requesting, then talking to, a lawyer.

Now, was this file an image (jpeg, gif, etc) or video (avi, mpeg, wmv, etc)?

If it was an image file, from what I understand, there's probably little to worry about. Even a lawyer still in junior high can argue what has already been decided in high court: As a digital image, it cannot be determined that the image is of a real person or a virtual person - unless the actual person can be produced. How can the subject's age be determined? There is a cottage industry (probably russian) of hundreds and hundreds of legal age "models" who actually can pass easily as preteen. And they are specifically marketed as "young, *****, angel, girlie, emo, twink, etc," to attract the CP crowd. It's probably the most profitable business on the internet.

Video files are probably more challenging than images to defend, but the same rules apply.

Now, with all that in mind, the police are going to raid a house for ONE file? that was downloaded, not uploaded? I don't think so. I just can't imagine it, not in this country. And I have quite an imagination.

If I can imagine that I'm wealthy, ageless, an irresistible hunk, and if I can imagine that all the conspiracy theories over the years could be true, (did you know that the side of the sun you don't see is the dark side?), and all that kind of stuff, then I should be able to believe that the police are chasing the people with one accidental download, in lieu of the sickos (the real criminals) who are distributing (uploading) it?!?!

And that this unlucky person could be so academically challenged that he doesn't know his basic rights (even rites) in this country.

And that YOU know enough to be able to post in these forums, yet ignorant of the fact that LIMEWIRE has no culpability in the CP traffic industry.

You're a fraud and so is your post.

After my last post here, I decided to go thru the forum again, just to verify a suspicion. It seems many, many, people have "accidentally" downloaded CP on their PCs.

I have used computers for 20 years or so, am a download junkie, and never have I accidentally downloaded CP or KP. What I have received, hundreds of times, are images, or websites of models who could easily pass as kids.

These images are almost always hi-def or very good quality, in color, and convincingly lead you to believe that these models are very young. The models appear to lack the conventional physical development of 18+ yr olds.

This stuff may be porn, but it is not KP or CP. These sites probably originate from Russia.

Don't let your misplaced paranoia convince you to hide your head in the sand. Re-boot your brain, and educate yourself about your computer, what's on it, what is real, and what is fantasy.

The fantasy part is the part that allows you believe that this is illegal CP or KP. You are only the victims of marketing strategies that target, very effectively, those who are really looking for, or interested in, this stuff.

What you downloaded was merely a form of junk mail. Nothing else. Although actual CP and KP can be very accessible on the net, I just don't think it's as easy as you think to get it.

The real traffickers are probably a bit more cautious than that... I mean, it is illegal... They are a closed industry, and deal with others they know.

Perhaps you can look at it this way: Let's pretend that you are interested in buying some 'pot' - the smokable stuff.

You don't really know anybody in the industry (pot dealers), and they don't know you. Chances of a successful business transaction (sale of a bag of pot) are limited at best.

This is where the street dealer (the guy on the corner) comes in. It's an excellent business niche for him. He has some good stuff, you smell the stuff... wow! reminds you of the blond hash you used to get all those years ago.... great stuff!!

You go home, roll a doobie, and (of course you don't inhale)... you take a real deep hit of the oregano the corner boy sold you.. oregano is not illegal, but it sure looks like pot.. OK, it doesn't smell like that great hash you remember, but it was treated to help seal the deal. You really thought it was pot but it wasn't.

And don't attack me for the analogy... yes, I think selling oregano as pot is actually a chargeable offense, I was just trying to make a point.

The stuff you got is more than likely legal porn - those models are of legal age - they just want their target audience to believe what their eyes tell them.

Same thing, different day

I so much wish I was smart enough to read this before downloading anything. I just gave my computer a format and it had no protection. To avoid getting tons of viruses again I used this program for porn. Big mistake. Seriously I've seen posts and I am very worried. I dont need that sh*t in my life because of a mistake. I'm not ashamed of dl-ing porn and I dont see why anyone would be. When your girlfriend/wife/boyfriend.. is somewhere for weeks its totally normal for people to look for visual stimulation but nevermind that. Problem is that Limewire contains such content and something should be done about it. Filter it out somehow. I deleted the sick stuff, reported it and I won't hesitate to contact police about it. Now I see I'm not the first and I am probably not the last person who had this experience with p2p program. There is a site you can report CP if you encounter it. <http://www.asacp.org/>

Dont be ashamed to do that. It may help root out this problem. I hope that one day it will.

Sometimes its deliberate to GET SOMEONE

True story: Wife found out about affair while separated from husband. To get her revenge, she waits until he is out of town, goes to his house to use his computer where using LimeWire, she downloads CP brazenly. Next day comes back with blank CD and burns a disk of it! A few days later, casually gives disk to friend to open (says she didn't know how -not!) so friend opens later and YIKES, is surprised to "see skin" (as she later says in deposition) and removes CD from her computer. Few days later, Wifey calls in tears asking for her to go to the house of hubby because she thinks he's having an affair (she knew this months before) and could friend look for "signs of infidelity on his computer"?

Hubby is away and they spend time going through his place. Friend doesn't find CP, but did see LW was running and when opened it, saw file names that suggested "skin" files, so she opted not to open any, just pointed them out to Wifey.

They go home.

Here's where ALL HELL BREAKS LOOSE...

Wife times this to her advantage. She gets all her ducks in a row (financial, attorney, etc.) and then WHAM! - takes CD to police and playing the VICTIM ROLE at the Oscar's level, convinces them that SHE & HER FRIEND FOUND the CD TOGETHER.

2 police interviews later (her story changes drastically) and interview of the friend, somehow are enough to get SEARCH & ARREST WARRANTS the next day. Bail set at \$250K

Months later, FORENSICS prove the hubby was out of town when CP downloaded and CD was burned, so that was dropped as evidence.

Meanwhile, they found NO FILES or organized FOLDERS like an offender should have, but there was random CP downloaded just a few weeks before the arrest which were deleted before most were opened (hubby suspects wifey was learning the system). Well, charges were dropped ONE YEAR and \$150K later!

JUSTICE? Though a neighbor witnessed her 3 hr visits to husband's house (while he was away) on both days CD created AND forensics prove he was away (passport confirmed), wife has not been arrested. WHY?? She's one hell of an actress and police screwed up and want to bury this one...

MORAL of the story...watch your back.

Anyone know a good attorney who is willing to take on a FALSE ARREST lawsuit near Seattle on contingency. (Hubby still in divorce court while funds frozen).

Assuming there's any truth to the story the Family Court will be briefed and may decide to grant the divorce without alimony. After that the husband is in a position to sue the woman.

A charge of false arrest is out of the question because the police apparently acted in good faith. Prosecution of the woman is up to the local Prosecutor, who may decide not to proceed if there is little likelihood of success.

If there is any truth to the story where are the links to the court case and the news articles?

Limewire is good source for mischievous/deceptive acts

Thank you for responding, thus proving there is a vibrant audience involved and attentive out there. The situation I referred to occurred in Nov of 2007 and that puts us at 1.5 yrs later (my how time flies like money!). So, it looks like the Prosecuting Attny has buried this one, but I would certainly love to know how to inspire her to FINISH what she started!

Particularly to explain Limewire's weight as evidence in a CP charge. Here's the gist of the scene I refer to: Limewire runs continuously 24/7 (having done so for over a year) and after a search was done on say: Neil Young...which brings in every file with the word "young" in it (use your creative imagination, there) is it not obvious that a CP collector would fill a folder with junk in minutes if they wanted to?

Well, wifey certainly was able to create chaos in 2 visits and leave a trail for computer forensics to prove it. Why isn't that enough for her conviction?? Witness places her alone at house for 3 hours on the two days CP was downloaded using Limewire, cell phone records show her in that neighborhood those two days, her police reports are obviously conflicting....

Oh, as per suing wives, attorney said defamation from a spouse is not possible UNLESS she is charged and found guilty. Double whammy to husband, thanks to inept prosecutor who first arrests wrong person, then hangs up case when there is a suspect under her nose with MOTIVE!

Limewire is an active public domain, is this really the first time its been used for mischievous behavior by an outsider?

You might as well ask the same thing about cars.
There are millions of those things out there too, and
many are in the hands of drunks and criminals.

Shall we ask Ford, Chrysler and GM to start tracking
where everybody goes? 🤖

🤖 Helpppp!!!!!!!!!!

i feel your pain i did something similar. I was searching the legal kind of porn on my ipod touch and i had something else written in the google search bar it was the song "your gonna go far kid" well i went to delete it and search porn but i made a mistake and didn't delete the the word kid at the end. So me being the dummy that i am i put porn in with the word kid. as if that was bad enough, as i clicked search i thought i heard my younger brother coming upstairs(by the way I'm 16) fearing he might ask me what i am doing i scrambled to turn off my ipod and instead i dropped my ipod while clicking on a fake government CP site that trys to trick pedophiles. when i made sure that my brother was downstairs i opened my ipod again and noticed that i was a new kind of porn site, one that i have never been on before so i clicked on the button that said i was 21 and then the button show me the pictures or something like that it, then brought me to a white page with writing and i was wondering were the porn was i then noticed the first sentence said welcome and thank you for coming to this site our sophisticated security system is tracking your location right now be prepared to be arrested for child pornography. i freaked out and immediately ran down stairs and unplugged the computer and modem i also unplugged all the phones i then checked my ipods history and released what i did. I was pissed off and scared at the same time. i downloaded an ip address hider to hide my ip address but i don't know if its to late. when i checked my internet history the fake website was American, i am canadian so i don't know if they can arrest me anyways so far its been 5 hours since the i accidentally came across the site. do you the cops will understand if i tell them

📄 **accidentally download**

My 16 year son was using limewire to download music when we got a trojun in our computer, he has been using something else now. However recently I was looking on his computer when I came accross a disturbing file name- yes a 9 year old girl video - it wouldnt play - thank God but the fact that it was there made me feel sick. We asked him about it and he denied putting it there and now I have read other people having the same experience and the fact that it was in his shared folder puts my mind at ease, knowing now it was probably put there while he was downloading music. We have 3 computers, one in my sons room which is not connected to the internet, he can plug it in when he wants to download music,

and we have a family computer (with Netnanny on it) and another computer which we do our banking on - this one is used for only that and nothing else.
 Anyway I told him about reading this here and that I know he didnt put it there, I feel a little guilty now for accusing him.
 Anyway it goes to show we have to be so careful what we do on the net.
 Thanks for listening.

Even though our research has shown that identity thieves are now using propriety automated software to scan P2P networks for personal information, an identity thief does not even necessarily require any special software in order to access personal information. The difference between conducting a search for tax records through LimeWire or through proprietary software is that the custom software is designed to connect to larger parts of file-sharing networks, so proprietary software conducts a more comprehensive scan for shared files in a shorter period of time.

Due to the way in which regular P2P file-sharing software function, the software is designed to stop a particular search after either a few hundred results are returned, or after a very short specific period of time. An identity thief using even regular P2P software can find a few hundred tax returns within 20 seconds, restart the P2P software, conduct the same search, and find another set of a few hundred different tax returns than had been found in the prior search. Within a few minutes an identity thief can gain access to thousands of tax returns and other private information, all without any custom software.

The LimeWire software is by no means the most popular P2P file-sharing software. LimeWire connects to the Gnutella Internet P2P file-sharing network, only one of over a dozen different file-sharing networks that presently exist. Additionally, there are currently well over a hundred software programs similar to LimeWire that connect to either one particular file-sharing network, such as the same network that LimeWire connects to which is the Gnutella network, or have the ability to connect to multiple file-sharing networks at once.

The LimeWire software is by no means the most popular P2P file-sharing software. LimeWire connects to the Gnutella Internet P2P file-sharing network, only one of over a dozen different file-sharing networks that presently exist. Additionally, there are currently well over a hundred software programs similar to LimeWire that connect to either one particular file-sharing network, such as the same network that LimeWire connects to which is the Gnutella network, or have the ability to connect to multiple file-sharing networks at once.

 BlackBerry

P2P & File-Sharing Software

File Sharing Software consists of software programs designed to let users download or upload files to or from other users or other groups of users. Many of the applications in this directory involve P2P or peer-to-peer technology, a computer network that uses the combined bandwidth of its users. Notable titles include Limewire, BitTorrent, and uTorrent.

New Research Shows Severe National Security Threat Posed By Computer File-Sharing Networks

FOR IMMEDIATE RELEASE

New research finds computers located in Iran, North Korea, China, and Russia scouring computer peer-to-peer file-sharing networks for information that could place national security at risk.

TORONTO, Ontario, Canada - June 1, 2009 – ZapShares Inc. announced today the findings of new research that indicates computer systems located in Iran, North Korea, China, and Russia are scouring computer Peer-To-Peer (also known as “P2P”) file-sharing networks for classified information that could place national security at risk.

The research found offshore computers searching for, among other things, information pertaining to many principal United States national defense contractors, weapons system information, classified government documents, information that could be used to steal the identity of United States citizens, and other data that could place national security at risk. “What we found most alarming was the fact that a majority of these searches originated from Iran, North Korea, China, and Russia,” said Bernard Trest, President of ZapShares Inc.

In a recent study ZapShares Inc. found that large numbers of people are inadvertently sharing personal tax returns, banking and other financial information, credit card information, and other data that identity thieves could use to steal a person’s identity. “We are very concerned regarding the threat that is posed to national security since individuals within countries such as Iran and North Korea are easily capable of stealing the identity of United States citizens,” said Trest.

To view a partial list of search terms ZapShares Inc. was able to discover that computers located within Iran, North Korea, China, and Russia are searching for on P2P file-sharing networks, visit: www.zapshares.com/nationalsecurity.pdf

ZapShares Inc.(TM) was founded in 2008 to develop innovative security solutions for P2P file-sharing networks. ZapShares offers the first and only solution to help protect 200 million P2P file-sharers from rampant identity theft and lawsuits. The companies ZapShares software is a free tool that scans and identifies potential security threats caused by P2P software installed on a user's computer. First-Of-Its-Kind Solution Protects 200 Million Computer Users From Rampant Identity Theft, Lawsuits

FOR IMMEDIATE RELEASE

New software offers first-ever solution to help protect 200 million P2P file-sharers from rampant identity theft and lawsuits; United States Federal Trade Commission warns about dangers of file-sharing.

TORONTO, Ontario, Canada - May 25, 2009 - ZapShares Inc. announced today the public release of their ZapShares software, which is the first software specifically designed to help protect the 200 million users of P2P file-sharing software such as LimeWire, FrostWire, Shareaza, and Ares Galaxy who are at high risk of identity theft and lawsuits.

“Many people who use file-sharing software are at high risk of having their identity and private information stolen, or are at risk of being sued by copyright holders, and up until now there has been no solution,” said Bernard Trest, President of ZapShares Inc.

A new study conducted by ZapShares shows that 95% of file-sharers are inadvertently making files available that could expose them to identity theft and lawsuits. “Many file-sharers are unintentionally sharing private information that can be used by identity thieves to empty out a victim’s bank account or otherwise financially destroy a person,” said Trest. The study found people are sharing, among other things, personal tax returns, banking and other financial information, credit card information, and other data that identity thieves could use to steal a person’s identity. The US Federal Trade Commission has issued a consumer warning regarding the dangers of using file-sharing networks, stating that using such networks can lead to identity theft and lawsuits. Identity theft consistently ranks at the top of US Federal Trade Commission consumer complaints and costs consumers \$1.2 billion annually.

“The abundant availability of private information on P2P file-sharing networks has now led to identity thieves and hackers using tools that automatically scan file-sharing networks for private data that can be used for the purposes of identity theft and other

malicious reasons,” said Trest. According to the ZapShares study, identity thieves and hackers are using these automated scanning tools to troll file-sharing networks for thousands of promising search terms such as “credit”, “tax”, “password”, and “bank”.

Businesses are also at risk. The ZapShares study also found confidential medical information, business plans, and sensitive financial data being inadvertently shared by employees of numerous businesses. Even more disturbing, the ZapShares study discovered the inclusion of many corporation names, some of which are involved in national security, and also the names of many government agencies.

People who share files using P2P file-sharing software are also at high risk of being sued by copyright holders. The entertainment industry has already filed lawsuits against well over 30,000 people that have shared copyrighted music and movies online. In one case, a Minnesota woman who was caught sharing music online was ordered by a jury to pay \$222,000 in damages.

“Most people that use file-sharing software don’t realize this,” said Trest, “but many file-sharing programs by default automatically share every file you download. The sharing of copyrighted materials leaves the vast majority of users of these programs vulnerable to lawsuits by copyright holders.”

To combat the rampant problem of identity theft and lawsuits on file-sharing networks, ZapShares Inc. has released a free software tool called ZapShares which scans a user’s computer, identifies any potential security threats, and prevents potentially sensitive files from being shared.

ZapShares Inc. has launched two versions of their ZapShares software;

- ZapShares Basic, which is limited to scanning for security threats caused by file-sharing software that is installed on a person’s computer. This basic version of ZapShares is offered as a free download and allows file-sharers to see if their computer has any security vulnerabilities caused by file-sharing software on their computer that could lead to identity theft and lawsuits.

- ZapShares PRO, which is a complete solution to help prevent file-sharers from being hit by identity thieves and lawsuits. ZapShares PRO automatically monitors a computer, identifies potential security threats caused by file-sharing software, and ensures that a user does not accidentally share files that could expose them and their private information to identity theft, or expose them to expensive lawsuits by copyright holders. ZapShares PRO also creates a “secure vault” by using temporary download folders that are automatically used by file-sharing software while downloading is in progress, and then moving the completed downloads to a final secure folder that is not shared over file-sharing networks.

To learn more about ZapShares and to get a free copy of ZapShares Basic, visit our website at: www.zapshares.com

New Study Shows Most People Unaware Of Security Risks Posed By P2P File-Sharing Software

FOR IMMEDIATE RELEASE

New study finds that most computer users are unaware that P2P file-sharing software is installed on their computer and do not realize that merely having the software installed can cause issues such as identity theft and lawsuits.

TORONTO, Ontario, Canada - June 18, 2009 - ZapShares Inc. announced today the findings of a new study indicating that most computer users are unaware that P2P file-sharing software has been installed on their computer. The study has also found that very few computer users are aware that merely having P2P file-sharing software installed on their computer can lead to issues such as identity theft and lawsuits by copyright holders.

The study found that 37% of respondents were aware that P2P file-sharing software was installed on their computer. In a follow-up question, respondents were asked to check their computer for a list of P2P file-sharing software which included LimeWire, FrostWire, Shareaza, Ares, eMule, Vuze, BitTorrent, uTorrent, and DC++. When asked this follow-up question, an incredible 59% of respondents replied “yes,” indicating that many people have P2P file-sharing software installed on their computer of which they are unaware. Many respondents volunteered that the software was installed by a spouse, child, or someone else in the household, and that they had been previously unaware of the software’s existence on their computer.

The respondents questioned during the study were also unaware of the dangers posed by having P2P file-sharing software installed. Only 7% of respondents were aware that P2P file-sharing software can cause the inadvertent sharing of private information and lead to issues such as identity theft, and only 21% of those questioned knew that copyright holders could file a lawsuit against them for sharing copyrighted materials. “What we found most alarming was that 91% of people who have P2P file-sharing software installed are unaware as to how to check which files are being shared by their P2P file-

sharing software, or how to modify these settings,” said Bernard Trest, President of ZapShares Inc.

In other recent studies, ZapShares Inc. found that large numbers of people are inadvertently sharing personal tax returns, banking and other financial information, credit card information, and other data that identity thieves could use to steal a person’s identity. Other research conducted by ZapShares Inc. found that computer systems located in Iran, North Korea, China, and Russia actively scanning P2P networks for, among other things, information pertaining to many principal United States defense contractors, weapons system information, classified government documents, and other data that could place national security at risk.

To view the complete results of the P2P file-sharing software awareness study, visit www.zapshares.com/awareness.pdf
